

Physics Review Sheet: Waves

Waves:

- Many phenomena in world exist in wave motion
- A disturbance that propagates from one place to another
- Two types:
 - Mechanical $\rightarrow$ sound, pressure, ocean
 - Electromagnetic $\rightarrow$ light, radio wave, cell phone signal, gamma radiation

Propagation Type:

- How a wave moves
- Two types:
 - Transverse $\rightarrow$ waves that vibrate perpendicular to direction of wave motion
 - Longitudinal $\rightarrow$ waves that vibrate parallel to direction of wave motion

Key properties:

- Period: length of time needed to complete one cycle of a wave
- Frequency: # of cycles completed in given time frame (cycles per second; Hertz Hz)
 - $\rightarrow$ inversely related to period: as time for completion of cycle increases, frequency decreases ($f=1/T$, $T=1/f$)
- Amplitude: absolute value of max. displacement from equil. (associated with power of wave)

Wavelength:

- λ (Lambda): variable used
- Physical distance from one part of wave to where it repeats that part again
- Doesn't always start at same spot but, should always have same length for same wave of constant frequency

What is moving in a wave?

- Particles in wave have no/very little net motion relative to overall wave
- Energy transfers within a wave (particles of medium just oscillate in place as wave passes through)
- The medium carries wave / is what wave is traveling through
- Mechanical waves must have a medium for wave to exist
- Electromagnetic waves don't need medium (all can travel through vacuum/empty space/materials; to a degree)
- Electromagnetic waves travel at speed of light ($c = 3.00 \times 10^8$ m/s) in a vacuum
- The speed of a wave only depends on medium it travels through

Longitudinal waves possess wavelength:

Compression / Longitudinal Waves (ex: sound waves)
