Microcompartmentation D.P. Jones,2018-01-18 Microcompartmentation refers to nonhomogeneous distribution of solutes in compartments of cells or associated structures without intervening membranal barriers Such variations in concentration of ions metabolites intracellular messengers and nutrients can introduce significant

heterogeneity in subcellular function and regulation The current focus on biological examples of microcompartmentation provides ample evidence for its importance and the role of physical structure in determining local chemical environments The examples present in the different chapters include microcompartmentation of Ca^{2+} H ATP ADP O_2 glycolytic intermediates fatty acids amino acids and nucleic acid precursors In reviewing these systems the authors provide a useful resource for experimental approaches to study microcompartmentation and provide the basis for future studies of its role in regulation of cell functions

Many-body Approaches at Different Scales G.G.N Angilella,C. Amovilli,2018-03-24 This book presents a collection of invited research and review contributions on recent advances in mainly theoretical condensed matter physics theoretical chemistry and theoretical physics The volume celebrates the 90th birthday of N H March Emeritus Professor Oxford University UK a prominent figure in all of these fields Given the broad range of interests in the research activity of Professor March who collaborated with a number of eminent scientists in physics and chemistry the volume embraces quite diverse topics in physics and chemistry at various dimensions and energy scales One thread connecting all these topics is correlation in aggregated states of matter ranging from nuclear physics to molecules clusters disordered condensed phases such as the liquid state and solid state physics and the various phase transitions both structural and electronic occurring therein A final chapter leaps to an even larger scale of matter aggregation namely the universe and gravitation A further no less important common thread is methodological with the application of theoretical physics and chemistry particularly density functional theory and statistical field theory to both nuclear and condensed matter
