Department, 1973 **Manual of Visual Signaling** Signal Corps United States Army, Manual of Visual Signaling Strictly speaking a visual signal is any visible sign by which intelligence is communicated but in a military sense the term visual signaling has a broader meaning and includes other methods of transmitting information than those which appeal to the sense of sight In most systems of signals suitable for military use each signal is composed of one or more separate units known as elements Having prescribed a certain number of elements the various signals are formed by having these elements appear singly or together in different arrangements or combinations The continental system is one of two elements namely the dot and the dash while the Morse system employs three elements the dot the dash and the space Having agreed upon a certain number of combinations of elements a system of signals is formed by giving a meaning to each combination These meanings usually include the letters of the alphabet and numerals combinations of which being used to formulate necessary information Combinations of elements of any system can also however be used to indicate any desired meaning With reference to period of visibility signals are of two kinds transient and permanent A transient signal is one which disappears as soon as completed a permanent signal is one that remains in view for some time Heliograph signals are transient signals while signals made by code flags are permanent signals Signals are divided into classes in accordance with the number of elements employed in their formation Thus signals using two elements are signals of the second class signals using three elements signals of the third class etc The standard apparatus used in visual signaling is fully described in a succeeding chapter Some of the instruments employed are used wholly for day and some wholly for night signaling Some devices either with or without slight variations are equally well adapted to day or night work Visual signaling presents a great field for ingenious and resourceful work and emergency will often demand the advantageous employment of other methods than those described herein **Technical Manual** United States Department of the Army, **Technical Manual** ,1983
