Warrell,Daniel E Keyler,2022-08-10 Venomous Bites from Non Venomous Snakes Second Edition thoroughly examines the potential hazards associated with bites by non front fanged snakes popularly but inaccurately called rear fanged snakes This diverse group contains approximately 80% of living snake species approximately 2 900 species A large proportion of these snakes were previously assigned to the family Colubridae but as a consequence of expanding systematics investigations have been split into multiple families and subfamilies Many of these snakes produce venoms or oral secretions that contain toxins and other biologically active substances A large variety of non front fanged snakes figure in the pet industry yet little documented information or formal study of their potential medical importance has been published Therefore although the possible medical importance of many of these species has been subjected to speculation since the mid 19th century there is a limited amount of useful descriptive information regarding the real hazard or lack thereof of this wide variety of snakes The first edition of this book provided one stop shopping by offering information regarding their possible toxicity and clinical relevance as well as recommendations for medical management of their bites The second edition expands and updates the content with detailed information about the effects and medical management of bites by a broad representation of non front fanged species The hypothetical venomous nature of some lizards considered as non venomous such as the Komodo monitor or dragon and their allies as well as the medical effects of their bites is also examined The dynamic taxonomy of advanced snakes is updated and the bases for some of these fluid changes are discussed Likewise terminology is also updated in order to reflect the ongoing debates regarding the definition of venom and the balanced reinforcement of nonmedical criteria used to define the biological basis of the term venomous Fills a gap in toxicological medical and herpetological literature by providing a comprehensive review of this entire assemblage of non front fanged snakes with particular attention given to their capacity to cause harm to humans Offers a

patient centered evidence based approach which is applied to analyzing documented case reports of bites inflicted by a broad representation of species Provides expanded and updated detailed information on the clinical management of medically significant bites from non front fanged snakes which is also methodically reviewed and specific recommendations are provided Includes updates of the fluid taxonomy of advanced snakes and also of terminology with particular regard to the definition of venom and the nonmedical criteria used to define the biological basis of the venomous condition in snakes and lizards

Socio-ecological Studies in Natural Protected Areas Alfredo Ortega-Rubio,2020-11-01 This book explores the interactions of local inhabitants and environmental systems in the Protected Natural Areas of Mexico Its goal is to help understand how social groups contextualize ecological knowledge how human activities contribute to modifying the environmental matrix how cultural and economic aspects influence the use management and conservation of their ecological environment and how social phenomena are to be viewed against the backdrop of ecological knowledge The book reviews the epistemological and historical bases of the socio ecological relationship and addresses the evolution of human natural systems From a methodological standpoint it assesses the tools required for the integration of human and natural dimensions in the management of the environmental matrix Further in the case studies section it reviews valuable recent experiences concerning the retro interactions of local inhabitants with their environmental matrix Given its scope the book offers a valuable asset for researchers and professionals all over the world especially those working in Latin American countries

Alien Gene Transfer in Crop Plants, Volume 1 Aditya Pratap,Jitendra Kumar,2013-11-01 Genetic engineering and biotechnology along with conventional breeding have played an important role in developing superior cultivars by transferring economically important traits from distant wild and even unrelated species to the cultivated varieties which otherwise could not have been possible with conventional breeding There is a vast amount of literature pertaining to the genetic improvement of crops over last few decades However the wonderful results achieved by crop scientists in food legumes research and development over the years are scattered in different journals of the World The two volumes in the series Alien Gene Transfer in Crop Plants address this issue and offer a comprehensive reference on the developments made in major food crops of the world These volumes aim at bringing the contributions from globally renowned scientists at one platform in a reader friendly manner The 1st volume entitled Alien Gene Transfer in Crop Plants Innovations Methods and Risk Assessment will deal exclusively with the process and methodology The contents of this volume have been designed to appraise the readers with all the theoretical and practical aspects of wide hybridization and gene transfer like processes and methods of gene transfer role of biotechnology with special reference to embryo rescue genetic transformation protoplast fusion and molecular marker technology problems such as cross incompatibility and barriers to distant hybridization and solutions to overcome them Since wild and weedy relatives of crop plants may have negative traits associated with them there are always possibilities of linkage drag while transferring alien alleles Therefore problems and limitations of alien gene

transfer from these species will also be discussed in this series Further the associated risks with this and assessment of risks will also be given due weightage **Pizzo & Poplack's Principles and Practice of Pediatric Oncology** Susan M. A Framework to Guide Selection of Chemical Alternatives National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Board on Chemical Sciences and Technology, Committee on the Design and Evaluation of Safer Chemical Substitutions: A Framework to Inform Government and Industry Decisions, 2014-10-29 Historically regulations governing chemical use have often focused on widely used chemicals and acute human health effects of exposure to them as well as their potential to cause cancer and other adverse health effects As scientific knowledge has expanded there has been an increased awareness of the mechanisms through which chemicals may exert harmful effects on human health as well as their effects on other species and ecosystems Identification of high priority chemicals and other chemicals of concern has prompted a growing number of state and local governments as well as major companies to take steps beyond existing hazardous chemical federal legislation Interest in approaches and policies that ensure that any new substances substituted for chemicals of concern are assessed as carefully and thoroughly as possible has also burgeoned The overarching goal of these approaches is to avoid regrettable substitutions which occur when a toxic chemical is replaced by another chemical that later proved unsuitable because of persistence bioaccumulation toxicity or other concerns Chemical alternative assessments are tools designed to facilitate consideration of these factors to assist stakeholders in identifying chemicals that may have the greatest likelihood of harm to human and ecological health and to provide guidance on how the industry may develop and adopt safer alternatives A Framework to Guide Selection of Chemical Alternatives develops and demonstrates a decision framework for evaluating potentially safer substitute chemicals as primarily determined by human health and ecological risks This new framework is informed by previous efforts by regulatory agencies academic institutions and others to develop alternative assessment frameworks that could be operationalized In addition to hazard assessments the framework incorporates steps for life cycle thinking which considers possible impacts of a chemical at all stages including production use and disposal as well as steps for performance and economic assessments The report also highlights how modern information sources such as computational modeling can supplement traditional toxicology data in the assessment process This new framework allows the evaluation of the full range of benefits and shortcomings of substitutes and examination of tradeoffs between these risks and factors such as product functionality product efficacy process safety and resource use Through case studies this report demonstrates how different users in contrasting decision contexts with diverse priorities can apply the framework This report will be an essential resource to the chemical industry environmentalists ecologists and state and local governments
