Stotz,2013-04-18 In the past century nearly all of the biological sciences have been directly affected by discoveries and
developments in genetics a fast evolving subject with important theoretical dimensions In this rich and accessible book Paul
Griffiths and Karola Stotz show how the concept of the gene has evolved and diversified across the many fields that make up
modern biology By examining the molecular biology of the environment they situate genetics in the developmental biology of
whole organisms and reveal how the molecular biosciences have undermined the nature nurture distinction Their discussion
gives full weight to the revolutionary impacts of molecular biology while rejecting genocentrism and reductionism and brings
the topic right up to date with the philosophical implications of the most recent developments in genetics Their book will be
