

Input Power Installation (continued)

Note: Refer to Figure 5 for the following procedure.

1. Ensure the controller power source is off.
2. Remove the switch cover plate and switch from the input power junction box.
Note: The switch is attached to the black transformer wire. Use care when removing the switch to prevent straining this connection.
3. Remove the conduit access knock-out plug in the bottom left corner of the junction box and install 3/4" electrical conduit to as shown.
Note: The access opening in the junction box is for 1/2" conduit. A 1/2" to 3/4" conduit adapter will be required.
4. Route the Hot, Neutral and Equipment Ground wires from the power source into the junction box.
5. Strip 1/2" (13 mm) insulation from the Hot (black) wire and secure to the remaining switch terminal. Using insulated wire connectors, splice the Neutral (white) wire to the white transformer wire and the Equipment Ground (green) wire to the green transformer wire.
6. Reposition and secure the switch and cover plate. Ensure the switch is set to the Off (down) position.

Field Wire Installation

1. To provide a field common wire, attach one wire to either solenoid lead of all valves to be operated by the controller.
2. Attach a separate power wire to each remaining solenoid lead. Label these wires for identification at the station output modules.
3. Using an approved waterproof splicing method, properly insulate all valve solenoid wire connections.
4. Route the field wires into the controller cabinet through 2" conduit. Remove approximately 3/8" (10 mm) insulation from the ends of each wire.
5. Connect the valve common wire(s) to terminal "C" of any station output module.
6. Connect each valve power wire to the appropriate station number terminal. See Figure 6.

⚠ Caution: Maximum current load per station must not exceed 0.5A.

7. If a 24 V a.c. pump start relay or master valve is used, connect the power wire to terminal "M" of station output module number 1 and the common wire to terminal "C" of any station output module.

Note: The Master (M) terminal on station output modules 2-4 is inoperative.

⚠ Caution: The pump start relay current load must not exceed 0.5A. Do not connect the pump starter directly to the controller—damage to the controller will result.
