Wernli Sr, 2011-04-01 The ROV Manual A User Guide for Observation Class Remotely Operated Vehicles is the first manual to provide a basic How To for using small observation class ROVs for surveying inspection and research procedures It serves as a user guide that offers complete training and information about ROV operations for technicians underwater activities enthusiasts and engineers working offshore The book focuses on the observation class ROV and underwater uses for industrial recreational commercial and scientific studies It provides information about marine robotics and navigation tools used to obtain mission results and data faster and more efficiently This manual also covers two common denominators the technology and its application It introduces the basic technologies needed and their relationship to specific requirements and it helps identify the equipment essential for a cost effective and efficient operation This user guide can be invaluable in marine research and surveying crime investigations harbor security military and coast guarding commercial boating diving and fishing nuclear energy and hydroelectric inspection and ROV courses in marine and petroleum engineering The first book to focus on observation class ROV Remotely Operated Vehicle underwater deployment in real conditions for industrial commercial scientific and recreational tasks A complete user guide to ROV operation with basic information on underwater robotics and navigation equipment to obtain mission results quickly and efficiently Ideal for anyone involved with ROVs complete with self learning questions and answers DESIGN, SYNTHESIS AND CONTROL OF A MECHANICAL SERVO PRESS: AN INDUSTRIAL APPLICATION , Abstract Due to precision flexibility simplicity in construction easy control higher speed and lower energy consumptions servo presses have recently become popular in metal forming applications Servo press technology combines the advantages of hydraulic and conventional mechanical presses without their drawbacks This study presents design construction and demonstration of a servo crank press system for metal forming operations The research involves kinematics and motion optimization dynamic modeling structural design and analysis servo motor selection automation and control and

operational performances of the servo press The press used in this work has a load capacity of 50 ton and stroke capacity of 200 mm Firstly optimized trajectories of ram scenarios are generated Then dynamic modeling using Lagrange approach is presented Next structural model is constructed and Finite Element Analysis FEA of press parts are performed within safety limits A servo motor with a reduction unit is selected based on dynamic model After that a new automation system is developed and Cascade Feed Forward CasFF control is applied Moreover four motion scenarios crank dwell link and soft motion are employed for the performance assessment of press Finally the dynamic model is verified by the experimental results The research study is carried out under support and grant of an industrial project aiming to provide know how to industry and researchers Key Words Servo crank press metal forming motion design dynamic modeling system control
