Splitting Methods for Partial Differential Equations with Rough Solutions Helge Holden,2010 Operator splitting or the fractional steps method is a very common tool to analyze nonlinear partial differential equations both numerically and analytically By applying operator splitting to a complicated model one can often split it into simpler problems that can be

analyzed separately In this book one studies operator splitting for a family of nonlinear evolution equations including hyperbolic conservation laws and degenerate convection diffusion equations Common for these equations is the prevalence of rough or non smooth solutions e g shocks Rigorous analysis is presented showing that both semi discrete and fully discrete splitting methods converge For conservation laws sharp error estimates are provided and for convection diffusion equations one discusses a priori and a posteriori correction of entropy errors introduced by the splitting Numerical methods include finite difference and finite volume methods as well as front tracking The theory is illustrated by numerous examples There is a dedicated Web page that provides MATLABR codes for many of the examples The book is suitable for graduate students and researchers in pure and applied mathematics physics and engineering
