**Introduction to Expert Systems** Frank Puppe, 2012-12-06 At present one of the main obstacles to a broader application of expert systems is the lack of a theory to tell us which problem solving methods are available for a given problem class Such a theory could lead to significant progress in the following central aims of the expert system technique Evaluating the technical feasibility of expert system projects This depends on whether there is a suitable problem solving method and if possible a corresponding tool for the given problem class Simplifying knowledge acquisition and maintenance The problem solving methods provide direct assistance as interpretation models in knowledge acquisition Also they make possible the development of problem specific expert system tools with graphical knowledge acquisition components which can be used even by experts without programming experience Making use of expert systems as a knowledge medium The structured knowledge in expert systems can be used not only for problem solving but also for knowledge communication and tutorial purposes With such a theory in mind this book provides a systematic introduction to expert systems It describes the basic knowledge representations and the present situation with regard to the identification realization and integration of problem solving methods for the main problem classes of expert systems classification diagnostics construction and simulation

Discrete Diversity and Dispersion Maximization Rafael Martí,Anna Martínez-Gavara,2023-11-16 This book demonstrates the metaheuristic methodologies that apply to maximum diversity problems to solve them Maximum diversity problems arise in many practical settings from facility location to social network analysis and constitute an important class of NP hard problems in combinatorial optimization In fact this volume presents a missing link in the combinatorial optimization related literature In providing the basic principles and fundamental ideas of the most successful methodologies for discrete optimization this book allows readers to create their own applications for other discrete optimization problems Additionally the book is designed to be useful and accessible to researchers and practitioners in management science industrial engineering economics and computer science while also extending value to non experts in combinatorial optimization Owing to the tutorials presented in each chapter this book may be used in a master course a doctoral seminar or as supplementary to a primary text in upper undergraduate courses The chapters are divided into three main sections The first section describes a metaheuristic methodology in a tutorial style offering generic descriptions that when applied create an implementation of the methodology for any optimization problem The second section presents the customization of the methodology to a given diversity problem showing how to go from theory to application in creating a heuristic The final part of the chapters is devoted to experimentation describing the results obtained with the heuristic when solving the diversity problem Experiments in the book target the so called MDPLIB set of instances as a benchmark to evaluate the performance of the methods Random-Like Multiple Objective Decision Making Jiuping Xu,Liming Yao,2011-03-25 What are the random like phenomena that can be found everywhere in real life world When carrying out a random sampling survey on the traffic situation we often obtain some descriptive results such as approximately expedite a little crowded and so on therefore the average level should be regarded as the random fuzzy phenomenon which is one of the random like phenomena Decision makers usually need to make the decision for these problems with random like phenomena Which model should be constructed for them How should we handle these models to find the optimal strategy How can we apply these models to solve real life problems with random like phenomena In order to answer these questions this book provides an up to date methodology system 5MRP for random like multiple objective decision making which includes problem system with random like phenomena model system with random like coefficients research system with random like uncertain methods Some practical applications are also provided to illustrate the effectiveness of the proposed methodology system Researchers practitioners and students in systems science economics mathematics information engineering and MS OR will get a lot of useful references from this research monograph Project Scheduling Erik Leuven Demeulemeester,Willy S.

Herroelen,2006-04-11 Our objectives in writing Project Scheduling A Research Handbook are threefold 1 Provide a unified scheme for classifying the numerous project scheduling problems occurring in practice and studied in the literature 2 Provide a unified and up to date treatment of the state of the art procedures developed for their solution 3 Alert the reader to various important problems that are still in need of considerable research effort Project Scheduling A Research Handbook has been divided into four parts Part I consists of three chapters on the scope and relevance of project scheduling on the nature of project scheduling and finally on the introduction of a unified scheme that will be used in subsequent chapters for the identification and classification of the project scheduling problems studied in this book Part II focuses on the time analysis of project networks Part III carries the discussion further into the crucial topic of scheduling under scarce resources Part IV deals with robust scheduling and stochastic scheduling issues Numerous tables and figures are used throughout the book to enhance the clarity and effectiveness of the discussions For the interested and motivated reader the problems at the end of each chapter should be considered as an integral part of the presentation **Informatics in Control, Automation and Robotics**
