Ellis, 2013-08-21 Electronic evidence and information gathering have become central issues in an increasing number of conflicts and crimes Electronic or cyber evidence used to mean the regular print out from a computer and a great deal of cyber exhibits in court are just that But for many years law enforcement officers have been seizing data media and computers themselves as they have become smaller and more ubiquitous In the very recent past investigators generated their own print outs sometimes using the original application program sometimes specialist analytic and examination tools More recently investigators have found ways of collecting evidence from remote computers to which they do not have immediate physical access provided such computers are accessible via a phone line or network connection It is even possible to track activities across a cyber network including the Internet These procedures form part of what is called cyber forensics though some people also use the term to include the use of computers to analyze complex data for example connections between individuals by examination of telephone logs and or bank account transactions Another use of the term is when computers are employed in the court itself in the form of cyber graphics to illustrate a complex situation such as a fraud or as a replacement for large volumes of paper based exhibits and statements This chapter is intended to provide in depth information on cyber forensics as a career a job and a science It will help you avoid mistakes and find your way through the many aspects of this diverse and rewarding field Income Tax Fundamentals Gerald E.
