Quantitative Logic and Soft Computing Bing-Yuan Cao,Shuili Chen,Guojun Wang,Sicong Guo,2010-10-14 Admittedly the notion intelligence or intelligent computing has been around us for several decades implicitly indicating any non conventional methods of solving complex system problems such as expert systems and intelligent control techniques that mimic human skill and replace human operators for automation Various kinds of intelligent methods have been suggested phenomenological or ontological and we have been witnessing quite successful applications On the other hand Soft Computing Techniques is the concept coined by Lot Zadeh referring to a set of approaches of computing which parallels the remarkable ability of the human mind to reason and learn in an environment of uncertainty imprecision and partial truth Such a notion is well contrasted with the conventional binary logic based hard computing and has been effectively utilized with the guiding principle of exploiting the tolerance for uncertainty imprecision and partial truth to achieve tractability bustness and low solution cost The soft computing techniques are often employed as the technical entities in a tool box with tools being FL ANN Rough Set GA etc Based on one s intuition and experience an engineer can build and realize hum like systems by smartly mixing proper technical tools effectively and efficiently in a wide range of fields For some time the soft computing techniques are also referred to as intelligent computing tools

Studying the immune microenvironment of liver cancer using artificial intelligence Dake Zhang,Jieliang Chen ,Bing Yang,2025-09-29 Liver cancer is ranked as the sixth most commonly diagnosed malignant primary tumor and the fourth main reason for cancer related death in the world Countless metastatic cascade steps are concealed in the microenvironment composed of the pivotal facets of the liver immune system The immune microenvironment has a more crucial role than we thought it would Current treatments may not only have difficulty achieving the desired therapeutic effect but also have obstacles with a higher recurrence rate New thinking in hepatic carcinoma s immune microenvironment is an urgent need Digital intelligence has not only deepened the understanding of

liver cancer but has also perpetually amended the treatment and diagnosis solutions Artificial intelligence AI has deeply affected the treatment of liver tumors not only in diagnosis and treatment but also in rehabilitation It brings incipient vitality to liver surgery More importantly it takes more preponderant rejuvenating opportunities for patients and a better individualized treatment experience Utilizing integrated multi omics approaches AI could help to improve the detection and characterization of liver cancer with explosively complex datasets containing genomic and molecular data from tissues to single cells This integrated algorithm is expected to inform disease diagnosis and staging as well as predict cancer relapse and treatment response Finding more immune targeting strategies that may help more patients shortly such as adoptive T cell transfer vaccination virotherapy and more reliable biomarkers could guide clinical decision making about liver cancer
