Mathematical Methods for Protein Structure Analysis and Design Concettina Guerra, Sorin Istrail, 2003-06-25 The papers collected in this volume reproduce contributions by leading scholars to an international school and workshop which was organized and held with the goal of taking a snapshot of a discipline undergoing tremendous growth Indeed the area of protein folding docking and alignment is developing in response to needs for a mix of heterogeneous expertise spanning biology chemistry mathematics computer science and statistics among others Some

of the problems encountered in this area are not only important for the scientific challenges they pose but also for the opportunities they disclose in terms of medical and industrial exploitation. A typical example is offered by protein drug interaction docking a problem posing daunting computational problems at the crossroads of geometry, physics and chemistry and at the same time a problem with unimaginable implications for the pharmacopoeia of the future. The school focused on problems posed by the study of the mechanisms hindering protein folding and explored different ways of attacking these problems under objective evaluations of the methods. Together with a relatively small core of consolidated knowledge and tools, important reactions were brought to this effort by studies in a multitude of directions and approaches. It is obviously impossible to predict which if any among these techniques will prove completely successful but it is precisely the implicit dialectic among them that best conveys the current flavor of the field. Such unique diversity and richness inspired the format of the meeting and also explains the slight departure of the present volume from the typical format in this series: the exposition of the current sediment is complemented here by a selection of qualified specialized contributions.

Calibration of Watershed Models
 Qingyun Duan, Hoshin V. Gupta, Soroosh Sorooshian, Alain N. Rousseau, Richard Turcotte, 2003-01-10
 Published by the American Geophysical Union as part of the Water Science and Application Series Volume 6
 During the past four decades computer based mathematical models of watershed hydrology have been widely used for a variety of applications including hydrologic forecasting, hydrologic design and water resources management. These models are based on general mathematical descriptions of the watershed processes that transform natural forcing (e.g. rainfall) over the landscape into response (e.g. runoff) in the rivers. The user of a watershed hydrology model must specify the model parameters before the model is able to properly simulate the watershed behavior.

Stability and Control of Conventional and Unconventional Aerospace Vehicle Configurations
 Bernd Chudoba, 2019-07-23
 This book introduces a stability and control methodology named AeroMech capable of sizing the primary control effectors of fixed wing subsonic to hypersonic designs of conventional and unconventional configuration layout. Control power demands are harmonized with static, dynamic and maneuver stability requirements while taking the six degree of freedom trim state into account. The stability and control analysis solves the static and dynamic equations of motion combined with non linear vortex lattice aerodynamics for analysis. The true complexity of addressing subsonic to hypersonic vehicle stability and control during the conceptual design phase is hidden in the objective to develop a generic vehicle configuration independent methodology concept. The inclusion of geometrically asymmetric aircraft layouts in addition to the reasonably well known symmetric aircraft types contributes significantly to the

overall technical complexity and level of abstraction The first three chapters describe the preparatory work invested along with the research strategy devised thereby placing strong emphasis on systematic and thorough knowledge utilization The engineering scientific method itself is derived throughout the second half of the book This book offers a unique aerospace vehicle configuration independent generic methodology and mathematical algorithm The approach satisfies the initial technical quest How to develop a configuration stability control methodology module for an advanced multi disciplinary aerospace vehicle design synthesis environment that permits consistent aerospace vehicle design evaluations

Multi-UAS Minimum Time Search in Dynamic and Uncertain Environments Sara Pérez Carabaza,2021-06-30 This book proposes some novel approaches for finding unmanned aerial vehicle trajectories to reach targets with unknown location in minimum time At first it reviews probabilistic search algorithms that have been used for dealing with the minimum time search MTS problem and discusses how metaheuristics and in particular the ant colony optimization algorithm ACO can help to find high quality solutions with low computational time Then it describes two ACO based approaches to solve the discrete MTS problem and the continuous MTS problem respectively In turn it reports on the evaluation of the ACO based discrete and continuous approaches to the MTS problem in different simulated scenarios showing that the methods outperform in most all the cases over other state of the art approaches In the last part of the thesis the work of integration of the proposed techniques in the ground control station developed by Airbus to control ATLANTE UAV is reported in detail providing practical insights into the implementation of these methods for real UAVs

Soil Conservation Service Curve Number (SCS-CN) Methodology S.K. Mishra,V.P. Singh,2013-03-14 The Soil Conservation Service SCS curve number CN method is one of the most popular methods for computing the runoff volume from a rainstorm It is popular because it is simple easy to understand and apply and stable and accounts for most of the runoff producing watershed characteristics such as soil type land use hydrologic condition and antecedent moisture condition The SCS CN method was originally developed for its use on small agricultural watersheds and has since been extended and applied to rural forest and urban watersheds Since the inception of the method it has been applied to a wide range of environments In recent years the method has received much attention in the hydrologic literature

The SCS CN method was first published in 1956 in Section 4 of the National Engineering Handbook of Soil Conservation Service now called the Natural Resources Conservation Service U S Department of Agriculture The publication has since been revised several times However the contents of the methodology have been nonetheless more or less the same Being an agency methodology the method has not passed through the process of a peer review and is in general accepted in the form it exists Despite several limitations of the method and even questionable credibility at times it has been in continuous use for the simple reason that it works fairly well at the field level
