

DESCRIPTION

When starting engine:

In order to supply sufficient fuel when starting the engine, by turning the starter switch ON, current ① is sent directly from the battery and passes through the decompression control unit and is reached the fuel pump relay. Fuel pump relay controls operation of the fuel pump.

After starting engine:

The current ② generated at No. 2 lg. coil (from cylinder) flows to the fuel pump relay's control circuit. The control circuit receives this current ② and send signal ③ to the SCR, turning it ON. When the SCR turns ON, current ④ is sent from the battery through the fuel pump relay, thus operating the fuel pump. For safety purposes the fuel pump stops automatically when the engine stop producing ignition spark and the signal from the ignition coil is not sent.

FUEL COCK

Two fuel cocks are provided for this fuel system. One is located on the fuel tank, the other is located behind the rear cylinder.

Main cock

A valve is provided at the top of the fuel cock, lever and can switch over to "OFF", "ON" and "RES". With the valve "ON" (normal), the main passage opens. With the valve "OFF", both holes close.

Sub cock

A valve is provided at the top of the fuel cock and can switch over to "OFF" and "ON". With the valve "ON" (normal), both holes (ON and RES) open with the valve "OFF", both holes close.

FUEL PUMP

Measure the resistance between the fuel pump lead wires. If the resistance noted to show infinity or too low a resistance value, it must be replaced.

20000 25000	Pocket meter
E.T.O. resistance	1 - 2 Ω

Place the fuel pump and battery as shown in the following figure. Measure the amount of gasoline discharged and conduct a test on the fuel pump.

WARNING:

Do not use gasoline, which is extremely flammable and explosive.

NOTE:

- The battery must be fully charged condition.
- Upon completion of the test, all the hardware should be removed from the each part.

- Attach fuel pump harness S/B to the battery (+) terminal and S/W to the battery (-) terminal with jumper wires.
- Measure the discharged amount from the fuel pump for 1 minute using a measuring cylinder.

Discharged amount	Over 600 ml (1.27 U.S. equivalent)
-------------------	---------------------------------------

If the discharged amount is less than the specification, it means that the fuel pump is defective. Replace the fuel pump with a new unit.
