

2 CROOKED TOE (HALLUX VALGUS)

Protruding bony spur (hallux valgus) can result in a crooked toe, eventually resulting in the deformity. Crooked feet can also be caused by trauma and require professional help for the feet.

SYMPTOMS:

The big toe joints should be able to move in all four directions. Crooked toes can require the attention of a podiatrist and, in some cases, professional help may require surgery.

MATERIALS NEEDED:

Knee-to-Knee

- 1/2" x 2" strip of tape by 3M (Scotch) - 1/2" long (length of foot) with 2 1/2" x 1/2" x 1/2" pieces - 10-20"
- 1/2" x 2" strip of tape by 3M (Scotch) - 1/2" long (width of foot) with 2 1/2" x 1/2" x 1/2" pieces - 10-20"

POINT OF TAPING:

Start along the side of the foot to pull the big toe back into alignment, and wrap around the foot to pull it forward.

EFFECTS OF TAPING:

The foot's alignment improves gradually with taping. However, a change in footwear is necessary for full recovery. Once shoes where the toes can move freely or stay flat on the floor are possible.

1. Measure and cut tape. Spread the ends. Place the tape on the base of the crooked toe of the big toe.
2. Extend the upper tape around the foot along the inner side of the foot. Extend the front end parallel to the foot, wrapping downward around the base of the big toe.
3. Place the base of the shorter 1/2" cut across the base of the big toe.
4. Extend the upper side of the tape around the base of the arch.
5. Extend the lower side of the 1/2" cut across the base to end just behind the toe.

NOTE: Repeat the tape as often as needed. Tape just off easily during walking due to friction.
