*Multidisciplinary Approaches to Culminating Student Experiences* Michael G. Strawser, Robin Yaure, 2024-05-14 Despite the relatively recent popularity of culminating experiences a multidisciplinary and practical resource that provides information for all types of culminating student experiences is not yet available The idea for this volume arose because of the recognition that a holistic and applied resource for those looking to have general knowledge of different ways to assess student learning especially at the undergraduate level was lacking This text seeks to fill a gap and provide a historical context for culminating experiences suggestions for assessment foundational knowledge for different types of projects and finally approaches to using these experiences in various disciplines Because of the information desired experts in their field from a wide variety of disciplines were approached to be chapter contributors This resource focuses predominantly on undergraduate students but many of the chapters can either be applied to both undergraduate and graduate students e g thesis or specifically focus on the graduate student population e g dissertation

*The Unfinished Quest* Clair T. Berube, 2008-06-01 Modern educators are currently ideologically in one of two camps those who see American education as heading in the right direction and those who fear that it has gone tragically astray For over 100 years the American educational system has been the hope of those who want to level the playing field of opportunity yet today we continue to lag behind several industrialized countries when comparing standardized science test scores Is this acceptable in the most advanced affluent country on earth Why are we not the reigning educational system on the planet And are standardized test scores even the best way to assess the type of learning it takes to lead the world in science achievement The nature of science does not lend itself well to bubble tests yet these assessments are all we have to prove that our students are good scientists This book was born of a science teacher s frustration brought on by the standardized

testing movement's reliance on high stakes tests as the sole measurement tool with which to measure achievement Science by its very nature relies on original thinking for discovery and innovation How can this be measured by a bubble test And how do these high stakes tests affect minorities girls those with disabilities and at risk students September 11 2001 alerted us that we Americans can be less creative than our enemies an unprecedented event in American history What if changing the way we teach and assess science learning better prepares our citizens for creative preventions and solutions to world problems instead of creating citizens who have to react to world problems The nature of science begs a better way
