issues As a result tax accounting issues have become more and more important and receive more scrutiny in determining tax policy Tax practitioners need to have a thorough understanding of tax accounting to be able to analyze and solve tax problems Over the years tax accounting has become more and more complex as the need for revenue has increased The tax accounting rules do not always match up with generally accepted accounting principles and in fact often deviate from them The goal of tax accounting is to produce income and to protect government revenue as opposed to informing the public of information necessary for a financial decision Tax accounting is not transactional but periodic which means that on an annual basis taxpayers must determine whether they have income or losses There are several ameliorative provisions such as net operating losses the tax benefit rule etc which may balance out certain tax accounting principles Indeed a substantial portion of every tax problem that practitioners face inevitably involves a tax accounting issue **Federal Tax Accounting** Stephen F.
