## **Wind Catchers Remarkable Example Of Iranian Green Architecture:**

*Wind Catchers Remarkable Example of Iranian Green Architecture* Amin Saeidian, 2014-11-21 It is almost impossible to read or watch the news today without seeing stories related to energy. At this time questions about energy are taking on an increasingly more important major role in the national discussion. The most common question asked is: In a world where the subject of minimizing the use of energy becomes more critical, how can we as architects take advantage of our environment with no or minimal impact on it? How can we learn from the ancient and traditional architecture and use those methods in our design in order to minimize energy use? One answer is to use a passive system utilizing natural ventilation to achieve energy reduction. This system can be found in both wealthy and less developed regions. There are many magnificent building styles from all over the world with new shapes, materials, arrangements, decorations, and concepts for heating, cooling, and more. But unfortunately, vernacular architecture, which is the product of the relationship between nature and culture, has been ignored over the last couple of centuries as modern methodologies took over. This is unfortunate since many of the old ways use natural methods and simple concepts.

*Green Technologies and Business Practices: An IT Approach* Ordóñez de Pablos, Patricia, 2012-08-31 Green technology plays an important role in the achievement of environmental sustainability. Tax incentives, carbon taxes, and rising fossil fuel costs are motivating increased growth and development of green products and services, many of which are the result of innovative discoveries in biotechnology and nanotechnology. *Green Technologies and Business Practices: An IT Approach* is an international platform that brings together academics, researchers, lecturers, policy makers, practitioners, and persons in decision-making positions from all backgrounds who ultimately share new theories, research findings, and case studies together, enhancing understanding and collaboration of green issues in business and the role of information technologies and also analyze recent developments in theory and practice. Furthermore, this book demonstrates the capacity of green models and policies, information technology, and management for the mutual understanding, prosperity, and overall well-being of all the citizens in the world. This title is perfect for politicians, professors, policy makers, government officers, and students alike.

*Lightweight Energy* Alessandra Zanelli, Carol Monticelli, Nebojsa Jakica, Zhengyu Fan, 2022-11-30 This book explores membrane materials as a means of translating natural and renewable resources into a more flexible, dynamic, and reactive architectural skin. It represents the first time that energy-saving design has been addressed systematically in relation to lightweight building systems and tensile membranes. Understanding of the energetic behavior of membranes and foils used as a building envelope is a fundamental theme, as it is the integration of flexible photovoltaics in membranes as well as the exploitation of water and wind resources. A theoretical methodological framework for consciously designing the membrane life cycle is presented. The authors cross-cut and combine exploration of climate-based design methodology and life cycle thinking strategies. Both active and passive systems are investigated, referring to alternative productive resources like sun, wind, and water. Case studies are brought forward in the book's second

half highlighting energy lightness for an increasingly dematerialized architecture and addressing inherent issues Four main research and development paths are presented the first two focusing on advancements in facade materials and Photovoltaic systems applicable to membrane architecture the third referring to fog and dew harvesting and the fourth dealing with the future frontier of flexible transparency and designs for well being through a passive solar system Energy Dynamics of Green Buildings Mohammad H. Naraghi,2020

**The Compact Edition of the Oxford English Dictionary** Sir James Augustus Henry

Murray,1971 Micrographic reproduction of the 13 volume Oxford English dictionary published in 1933      **Iranian Vernacular Ice-Houses** Fatemeh Tehrani,Aryan Amirkhani,2021-07-14 Iranian architecture is formed in relation to its Hot and Dry climate In this climate most of the vernacular buildings are constructed by mud or sun dried bricks There are so many facilities that Iranian architecture has provided for better living such as Wind Catchers which exhaust warm air from buildings during the day Cisterns with cylindrical stores placed in the depth of the earth to preserve the cold fresh water during the hot seasons Ice Houses with walls behind which water in shallow channels freezes at nights etc The great heritage of the Iranian architecture and traditions are not well known yet The construction traditions of vernacular architecture in Iran reveal great methods of using natural energy resources which reduce the need to the fossil fuel Among different Iranian cultural heritage Ice Houses are selected as the main subject of this book      **Wind Towers** Mehdi N. Bahadori,Alireza Dehghani-sanij,Ali Sayigh,2014-06-04 This unique volume provides the only holistic treatment of wind towers a core aspect of sustainable architecture in hot arid climates The authors explain how traditional incarnations of these structures provide significant decreases in energy consumption through their use of renewable wind resources to cool buildings and water storage facilities Beginning with the underlying scientific principles the design and operation of wind towers is explained in depth and suggestions for optimization are provided supported by the authors findings from recent analytical studies

**Wind Towers as a Strategy for Sustainable Schools in Yazd, Iran** Sahar Zahiri,2008      *The Wind-catcher, a Traditional Solution for a Modern Problem* : Narguess Khatami,2009 This study investigated the ability of wind catcher as an environmentally friendly component to provide natural ventilation for indoor environments and intended to improve the overall efficiency of the existing designs of modern wind catchers In fact this thesis attempts to answer this question as to if it is possible to apply traditional design of wind catchers to enhance the design of modern wind catchers Wind catchers are vertical towers which are installed above buildings to catch and introduce fresh and cool air into the indoor environment and exhaust inside polluted and hot air to the outside In order to improve overall efficacy of contemporary wind catchers the study focuses on the effects of applying vertical louvres which have been used in traditional systems and horizontal louvres which are applied in contemporary wind catchers The aims are therefore to compare the performance of these two types of louvres in the system For this reason a Computational Fluid Dynamic CFD model was chosen to simulate and study the air movement in and around a wind catcher when using vertical and horizontal louvres The results indicate significant improvements on the wind catcher s performance by applying vertical louvres up to 28% Although applying vertical louvres helps to improve the performance of the windcatchers diagonal main partitions which have been used in contemporary wind catchers create restrictions against air entry Therefore the effects of applying other forms of main partitions such as perpendicular and H shape partitions were investigated The results of this investigation reveal that applying H shape partitions can improve the efficiency of the system under certain conditions when the prevailing wind blows against a bigger

segment and the opposite phenomena was observed when then direction of the prevailing wind changed      *Living with the Desert* Elisabeth Beazley, Michael Harverson, Susan Roaf, 1982      **Using Wind Catchers as a Passive Cooling System for Residential Buildings in Cyprus**, 2011
