

LGfL HomeProtect®

Windows Installation Guide

Prerequisites

- Windows 10
- Software deployment tools or access to each device to manually install the MSI
- HomeProtect welcome email from LGfL. If you do not have this, please register at homeprotect.lgfl.net.

Before deploying the client filter, please test applications that will be used as some may not work with the HTTPS decryption that is used to inspect the traffic. Instructions for excluding certain domains from being decrypted can be found in the White/Blacklisting URLs section below.

Deployment Scenarios

There are different ways to connect your devices to your school filtering policy. Please read through the options and decide which will work best before continuing.

A. Google/Microsoft Sign In

This is the default option whereby no configuration is necessary as long as your Google/Microsoft domain name was given on the sign up form. When the device is first used outside of the school network, the user will be prompted to sign in with a Google or Microsoft account.

This should only need to be done once and the login name is remembered from that point onwards.

B. Azure AD Joined SSO

If your devices are joined to Azure AD and the domain name was given on the signup form, the devices will log in automatically without any prompts. No further configuration is required besides joining the devices to Azure AD.

C. Active Directory UPN SSO

If your devices are joined to Active Directory, the User Principal Name can be registered in HomeProtect to achieve single-sign-on. You can find the UPN by looking at the properties for a user on the Account tab.

Please send the UPN suffix (the second box) to homeprotect@lgfl.net so we can register the domain.

D. Command Line Installation Parameter

If none of the other options are suitable, you can use a command line to associate the installation with your policy. In your welcome email, you will have been given a group name which will start `cfdefault@`.
