Rappaport, Brian D. Woerner, Jeffrey H. Reed, William H. Tranter, 2012-12-06 Wireless personal communications or wireless as it is now being called has arrived The hype is starting to fade and the hard work of deploying new systems and services for personal communications is underway In the United States the FCC propelled the

wireless era from infancy to mainstream with a 7.7 billion auction of 60 MHz of radio spectrum in the 1800-1900 MHz band. With the largest single sale of public property in the history of mankind, mostly complete the resources of the entire world are being called upon to develop inexpensive, rapidly deployable wireless systems and subscriber units for an industry that is adding subscribers at greater than 50% annual rate. This growth is commonplace for wireless service companies throughout the world and in the U.S. where as many as 7 licensed wireless service providers may be competing for cellular PCS customers within the next couple of years. Differentiators in cost, quality, service, and coverage will become critical to customer acceptance and use. Many of these issues are discussed in the papers included in this book. **Cross-Disciplinary**

Applications of Artificial Intelligence and Pattern Recognition: Advancing Technologies Mago, Vijay Kumar, Bhatia, Nitin, 2011-12-31. The need for intelligent machines in areas such as medical diagnostics, biometric security systems, and image processing motivates researchers to develop and explore new techniques, algorithms, and applications in this evolving field. *Cross-Disciplinary Applications of Artificial Intelligence and Pattern Recognition: Advancing Technologies* provides a common platform for researchers to present theoretical and applied research findings for enhancing and developing intelligent systems. Through its discussions of advances in and applications of pattern recognition technologies and artificial intelligence, this reference highlights core concepts in biometric imagery, feature recognition, and other related fields along with their applicability. *Proceedings of CECNet 2022* Antonio J. Tallón-Ballesteros, 2022-12-15. Electronics communication and networks coexist, and it is not possible to conceive of our current society without them. Within the next decade, we will probably see the consolidation of 6G-based technology accompanied by many compatible devices, and fiber optic is already an advanced technology with many applications. This book presents the proceedings of CECNet 2022, the 12th International Conference on Electronics Communications and Networks, held as a virtual event with no face-to-face participation in Xiamen, China, from 4 to 7 November 2022. CECNet is held annually and covers many interrelated groups of topics such as electronics technology, communication engineering and technology, wireless communications engineering and technology, and computer engineering and technology. This year, the conference committee received 313 submissions. All papers were carefully reviewed by program committee members, taking into consideration the breadth and depth of research topics falling within the scope of the conference, and after further discussion, 79 papers were selected for presentation at the conference and for publication in this book. This represents an acceptance rate of about 25%. The book offers an overview of the latest research and developments in these rapidly evolving fields and will be of interest to all those working with electronics communication and networks. **Electromagnetic Waves** Ahmed Kishk, 2011-07-05. This volume is based on the contributions of several authors in electromagnetic waves propagations. Several issues are considered. The contents of most of the chapters are highlighting non-classic presentation of wave propagation and interaction with matters. This volume bridges the gap between physics and engineering in these issues. Each chapter keeps the author notation that the reader should be aware of as he
