mechanism utilizes vacuum interrupters to break the current when changing tap positions. Since all arcing takes place within a vacuum chamber, oil contamination is eliminated and the arcing contact life is prolonged.

Control of the motor drive equipment may be either manual or automatic/manual, depending on the requirements of the installation, and can be located at

the transformer and/or on a remote panel. When equipped with automatic controls a relatively constant voltage can be maintained automatically at some predetermined load center as the transformer input voltage fluctuates and as load conditions vary.
