Yang,Amin Rida,Manos Tentzeris,2009-08-08 This book presents a step by step discussion of the design and development of  
radio frequency identification RFID and RFID enabled sensors on flexible low cost substrates for UHF frequency bands  
Various examples of fully function building blocks design and fabrication of antennas integration with ICs and  
microcontrollers power sources as well as inkjet printing techniques demonstrate the revolutionary effect of this approach in  
low cost RFID and RFID enabled sensors fields This approach could be easily extended to other microwave and wireless  
applications as well The first chapter describes the basic functionality and the physical and IT related principles underlying  
RFID and sensors technology Chapter two explains in detail inkjet printing technology providing the characterization of the  
conductive ink which consists of nano silver particles while highlighting the importance of this technology as a fast and  
simple fabrication technique especially on flexible organic substrates such as Liquid Crystal Polymer LCP or paper based  
substrates Chapter three demonstrates several compact inkjet printed UHF RFID antennas using antenna matching  
techniques to match IC s complex impedance as prototypes to provide the proof of concept of this technology Chapter four  
discusses the benefits of using conformal magnetic material as a substrate for miniaturized high frequency circuit  
applications In addition in Chapter five the authors also touch up the state of the art area of fully integrated wireless sensor  
modules on organic substrates and show the first ever 2D sensor integration with an RFID tag module on paper as well as the  
possibility of 3D multilayer paper based RF microwave structures Table of Contents Radio Frequency Identification
