Security in Computing Systems Joachim Biskup, 2008-11-14 This monograph on Security in Computing Systems Challenges Approaches and Solutions aims at introducing surveying and assessing the fundamentals of security with respect to computing Here computing refers to all activities which individuals or groups directly or indirectly perform by means of computing systems i.e. by means of computers and networks of them built on telecommunication We all are such individuals whether enthusiastic or just bowed to the inevitable So as part of the information society we are challenged to maintain our values to pursue our goals and to enforce our interests by consciously designing a global information infrastructure on a large scale as well as by appropriately configuring our personal computers on a small scale As a result we hope to achieve secure computing Roughly speaking computer assisted activities of individuals and computer mediated cooperation between individuals should happen as required by each party involved and nothing else which might be harmful to any party should occur The notion of security circumscribes many aspects ranging from human qualities to technical enforcement First of all in considering the explicit security requirements of users administrators and other persons concerned we hope that usually all persons will follow the stated rules but we also have to face the possibility that some persons might deviate from the wanted behavior whether accidentally or maliciously

Web Services Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju, 2003-09-04 Like many other incipient technologies Web services are still surrounded by a substantial level of noise This noise results from the always dangerous combination of wishful thinking on the part of research and industry and of a lack of clear understanding of how Web services came to be On the one hand multiple contradictory interpretations are created by the many attempts to realign existing technology and strategies with Web services On the other hand the emphasis on what could be done with Web services in the future often makes us lose track of what can be really done with Web services today and in the short term These factors make it extremely difficult to get a coherent picture of what Web services are what they contribute and where they will be applied Alonso and his co authors deliberately take a step back Based on their academic and industrial experience with middleware and enterprise application integration systems they describe the fundamental concepts behind

the notion of Web services and present them as the natural evolution of conventional middleware necessary to meet the challenges of the Web and of B2B application integration Rather than providing a reference guide or a how to write your first Web service kind of book they discuss the main objectives of Web services the challenges that must be faced to achieve them and the opportunities that this novel technology provides Established as well as recently proposed standards and techniques e g WSDL UDDI SOAP WS Coordination WS Transactions and BPEL are then examined in the context of this discussion in order to emphasize their scope benefits and shortcomings Thus the book is ideally suited both for professionals considering the development of application integration solutions and for research and students interesting in understanding and contributing to the evolution of enterprise application technologies Computers, Software Engineering, and Digital Devices Richard C. Latest Trends of Information Technology Dr. Kashif Qureshi, 2019-07-20 Just some years before there have been no throngs of Machine Learning scientists developing intelligent merchandise and services at major corporations and startups Once the youngest folks the authors entered the sector machine learning didn't command headlines in daily newspapers Our oldsters had no plan what machine learning was including why we would like it to a career in medication or law Machine learning was an advanced tutorial discipline with a slender set of real world applications And people applications e.g. speech recognition and pc vision needed most domain data that they were usually thought to be separate areas entirely that machine learning was one tiny part Neural networks the antecedents of the deep learning models that we tend to specialize in during this book were thought to be out of date tools In simply the previous five years deep learning has taken the world by surprise using fast progress in fields as diverse as laptop vision herbal language processing computerized speech recognition reinforcement learning and statistical modelling With these advances in hand we can now construct cars that power themselves with increasing autonomy clever reply structures that anticipate mundane replies assisting humans to dig out from mountains of email and software program retailers that dominate the world's first class people at board video games like Go a feat once deemed to be a long time away Already these equipment are exerting a widening impact changing the way films are made diseases are diagnosed and enjoying a developing role in simple sciences from astrophysics to biology This e book represents our attempt to make deep learning approachable instructing you each the concepts the context and the code
