throughout multifaceted disciplines FGIT 2009 was the first mega conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT conducted by separate scientific committees but coordinated in order to expose the most important contributions. It included the following international conferences: Advanced Software Engineering and Its Applications, ASEA Bio Science and Bio Technology, BSBT Control and Automation, CA Database Theory and Application, DTA Disaster Recovery and Business Continuity, DRBC published independently, Future Generation Communication and Networking, FGCN that was combined with Advanced Communication and Networking, ACN Grid and Distributed Computing, GDC Multimedia, Computer Graphics and Broadcasting, MulGraB Security Technology, SecTech, Signal Processing, Image Processing and Pattern Recognition, SIP and U and E Service Science and Technology, UNESST.

XML Based Service Provisioning in Converged Voice and Data Networks Sertac Cetiner, 2008-02-28. Diploma Thesis from the year 2001 in the subject Electrotechnology grade 1.7 University of Ulm language English abstract. In today's world there are mainly two types of communication networks: circuit-switched networks and packet-switched networks. The current telephone networks are mostly based on the circuit-switched networks whereas the Internet is mainly based on the packet-switched networks which are also called IP networks. However, there is a strong tendency to combine both of these networks which points to the direction that the IP networks are going to replace services provided by current telephone networks. This would

eventually mean that IP networks might replace the telephone networks in the future. Following are some reasons why IP networks seem to replace the circuit switched networks. First of all, the IP networks provide cheaper communication. Considering that the Internet access is nearly free, the cost advantage of IP networks gets clearer.²⁵ Secondly, IP networks provide the ability of integrating the data and voice applications and even some other applications like video conferencing, integrated voice mail, e-mail, and the like.²⁶ Another important reason is that IP networks allow open implementation of end systems. With a reasonable programming knowledge, everybody could implement an end system for IP networks. In the classical telephony, end users cannot implement any end system but have to use whatever provided by the service providers.
