

Using and Making a Biological Key

Classification is a way of separating a large group of closely related organisms into smaller subgroups. Classification makes everyday life easier by putting organisms in a useful system. Classification helps us to group the organisms we live with every day. Classification also lets us have a system for reference and will continue to help as we study the organisms around us. The scientific names of organisms are based on the classification systems of living organisms. To classify an organism, scientists often use a taxonomic key that lists specific characteristics, such as structure and behavior, in such a way that an organism can be identified.

Essential Question: Will you be able to organize a lot of 14 sharks using a taxonomic key?

Hypothesis: If I follow the taxonomic key, I will be able to identify the 14 pictured sharks.

Materials: Ruler, Shark data sheet, taxonomic key, paper, pencil

Procedure:

1. Use the figure below as a guide to the shark parts used in the taxonomic key on the next page.
2. Read sentences 1A and 3B of the key then shade Shark 1 on your data sheet. Follow the directions in the sentences and continue until you determine the family name of the Shark.
3. Continue this process for each shark on the data sheet until you have identified the family for all of them.
