Quantum Geometry Margaret Prugovecki,2013-03-14 This monograph presents a review and analysis of the main mathematical physical and epistemological difficulties encountered at the foundational level by all the conventional formulations of relativistic quantum theories ranging from relativistic quantum mechanics and quantum field theory in Minkowski space to the various canonical and covariant approaches to quantum gravity It is however primarily devoted to the systematic presentation of a quantum framework meant to deal effectively with these difficulties by reconsidering the foundations of these subjects analyzing their epistemic nature and then developing mathematical tools which are specifically designed for the elimination of all the basic inconsistencies A carefully documented historical survey is included and additional extensive notes containing quotations from original sources are incorporated at the end of each chapter so that the reader will be brought up to date with the very latest developments in quantum field theory in curved spacetime quantum gravity and quantum cosmology The survey further provides a backdrop against which the new foundational and mathematical ideas of the present approach to these subjects can be brought out in sharper relief

Symmetries of Spacetimes and Riemannian Manifolds Krishan L. Duggal, Ramesh Sharma, 2013-11-22 This book provides an upto date information on metric connection and curvature symmetries used in geometry and physics More specifically we present the characterizations and classifications of Riemannian and Lorentzian manifolds in particular the spacetimes of general relativity admitting metric i.e. Killing holothetic and conformal connection i.e. affine conformal and projective and curvature symmetries Our approach in this book has the following outstanding features a It is the first ever attempt of a comprehensive collection of the works of a very large number of researchers on all the above mentioned symmetries b We have aimed at bringing together the researchers interested in differential geometry and the mathematical physics of general relativity by giving an invariant as well as the index form of the main formulas and results c Attempt has been made to support several main mathematical results by citing physical examples as applied to general relativity d Overall the presentation is self contained fairly accessible and in some special cases supported by an extensive list of cited references e The material covered should stimulate future research on symmetries Chapters 1 and 2 contain most of the prerequisites for reading the rest of the book We present the language of semi Euclidean spaces manifolds their tensor calculus geometry of null curves non degenerate and degenerate light like hypersurfaces All this is described in invariant as well as the index form
