Computational Methods in Engineering & Science Zhenhan Yao,Mingwu Yuan,2007-12-31 The 9th EPMESC was successfully held in Macao in November of 2003 At the end of the conference the Board of the EPMESC series decided that the next conference would be held in a city of the mainland of China Also I was assigned to be the Chair person of the Conference No doubt this is a great honor to me and also a challenge because there are so many professional international conferences in computational mechanics happening frequently in the world After the successful organizing of WCCM6 in Beijing September of 2004 I engaged to organize the 10th EPMESC First of all I had to choose the venue of the Conference After some investigation and a lot of negotiation we went to see the site of the venue in Sanya Hainan Island the south most city in China Finally we made the decision The most important reason for the choice was the ecological environment of this city It is beneficial to our health after hard work We scientists and engineers need a good relaxing place after working hard a place to enjoy life with friends and family Sanya is an ideal place and a real green city Blue sky and white clouds the peaceful sea and the long beach with white sand shells and pearls no pollution and no industry Everything is so beautiful

Steel & Composite Structures ,2010

Structural Failure and Plasticity X.L. Zhao,R.H. Grzebieta,2000-10-04 As mankind

continues to push back the boundaries and begins to explore other worlds and the ocean depths a thorough understanding of how structures behave when subjected to extremes in temperature pressure and high loading rates will be essential This symposium provided the perfect forum for presenting research into structures subjected to such extreme loads There were a large number of papers presented under topics of impact blast and shock loading indicating a strong research interest in high rates of loading Similarly new topics have been added to the traditional symposium list such as fire loading earthquake loading and fatigue and connection failures It is clear now that fundamental knowledge of plastic deformation of structures to various extreme loads is coming of age Each full paper was peer reviewed by at least two experts in the field

Numerical Modeling Strategies for Sustainable Concrete Structures Pierre Rossi, Jean-Louis Tailhan, 2022-06-30 This volume highlights the latest advances innovations and applications in the field of sustainable concrete structures as presented by scientists and engineers at the RILEM International Conference on Numerical Modeling Strategies for Sustainable Concrete Structures SSCS held in Marseille France on July 4-6 2022 It demonstrates that numerical methods finite elements finite volumes finite differences are a relevant response to the challenge to optimize the utilization of cement in concrete constructions while checking that these constructions have a lifespan compatible with the stakes of sustainable development They are indeed accurate tools for an optimized design of concrete constructions and allow us to consider all types of complexities for example those linked to rheological physicochemical and mechanical properties of concrete those linked to the geometry of the structures or even to the environmental boundary conditions This optimization must also respect constraints of time money security energy CO2 emissions and more generally life cycle more reliably than the codes and analytical approaches currently used Numerical methods are undoubtedly the best calculation tools at the service of concrete eco construction The contributions present traditional and new ideas that will open novel research directions and foster multidisciplinary collaboration between different specialists
