1 Introduction

In this extraordinarily thorough and thoughtful work, Matthew Adler proves himself a grandmaster of the moral evaluation of public policy. The core idea of the book is that large-scale public policies should be designed to maximize the expectation of a continuous prioritarian social welfare function (SWF). In other words, they should maximize the expectation of the sum-total of transformed individual utilities, where the transformation gives greater weight to increases in utility the worse off an individual is in absolute terms. [Formally, a continuous prioritarian SWF holds that outcome x is at least as good as outcome y iff, for every utility function $u(\cdot)$ in the set of utility functions \mathbf{U} that represent individual well-being, $\sum_{i=1}^N g(u_i(x)) \geq \sum_{i=1}^N g(u_i(y))$, where $g(\cdot)$ is a strictly increasing and strictly concave function. If $m(x)$ is a moral value function that evaluates outcomes in this manner, then, on Adler's view, public policy a is at least as good as policy b iff, for a given outcome set \mathbf{O} and a probability function $\pi_a(\cdot)$ linking any given policy a with any outcome, $\sum_{x \in \mathbf{O}} \pi_a(x) m(x) \geq \sum_{x \in \mathbf{O}} \pi_b(x) m(x)$.] The heart of this proposal is simple and close to ideas proposed by others, most notably Parfit (In: Clayton M, Williams A (eds) *The ideal of equality*, 2002; *Utilitas* 24:399–440, 2012). The genius of this work lies in the painstaking and creative way it is justified and operationalized. In what follows, I shall summarize the book and critically analyze a few key arguments.
