Statistical and Methodological Myths and Urban Legends

Charles E. Lance, Charles E. Lance, Robert J. Vandenberg, 2010-10-18 This book provides an up to date review of commonly undertaken methodological and statistical practices that are sustained in part upon sound rationale and justification and in part upon unfounded lore. Some examples of these methodological urban legends as we refer to them in this book are characterized by manuscript critiques such as: a) your self report measures suffer from common method bias; b) your item to subject ratios are too low; c) you can't generalize these findings to the real world; or d) your effect sizes are too low. Historically, there is a kernel of truth to most of these legends, but in many cases that truth has been long forgotten, ignored, or embellished beyond recognition. This book examines several such legends. Each chapter is organized to address: a) what the legend is; b) what we almost all know to be true; c) what the kernel of truth is to each legend; d) what the myths are that have developed around this kernel of truth; and e) what the state of the practice should be. This book meets an important need for the accumulation and integration of these methodological and statistical practices.
