It is worth mentioning: 1 the preference for natural, simple and flexible diets that drive the further expansion of plant-focused formulations; 2 the focus on food sustainability, food waste reduction; and 3 the interest in healthy eating as the basis for good health. The hectic routine and rapid urbanization in developed and developing regions respectively have shifted consumer preferences toward bread and baked foods, which interestingly are often high in sugars and are categorized as having a high glycemic index. This Special Issue seeks to provide fundamental understanding in this area and novel strategies to improve the nutritional properties of baked goods, including a decrease in starch bioaccessibility, sugar reduction, increase in fiber and/or protein content, and the improvement of phytochemical bioactivity. This Special Issue will also cover studies on the physical and sensory improvements of baked goods that may provide a mechanistic understanding to minimize the loss of quality after the incorporation of nutritional improving ingredients such as edible byproducts, proteins or fibers.
