When Did Grade R Teachers Will Get Increment:

Assessing Schools for Generation R (Responsibility) Michael P. Mueller, Deborah J. Tippins, Arthur J. Stewart, 2013-07-17
Today's youth will face global environmental changes as well as complex personal and social challenges. To address these issues, this collection of essays provides vital insights on how science education can be designed to better engage students and help them solve important problems in the world around them. *Assessing Schools for Generation R: Responsibility* includes theories, research, and practices for envisioning how science and environmental education can promote personal, social, and civic responsibility. It brings together inspiring stories, creative practices, and theoretical work to make the case that science education can be reformed so that students learn to meaningfully apply the concepts they learn in science classes across America and grow into civically engaged citizens. The book calls for a curriculum that equips students with the knowledge, skills, attitudes, and values to confront the complex and often ill-defined socioscientific issues of daily life. The authors are all experienced educators and top experts in the fields of science and environmental education, ecology, experiential education, educational philosophy, policy, and history. They examine what has to happen in the domains of teacher preparation and public education to effect a transition of the youth of America. This exciting, informative, sophisticated, and sometimes provocative book will stimulate much debate about the future direction of science education in America and the rest of the world. It is ideal reading for all school superintendents, deans, faculty, and policymakers looking for a way to implement a curriculum that helps build students into responsible and engaged citizens.
