The Art Of The Metaobject Protocol:

The Art of the Metaobject Protocol Gregor Kiczales, Jim Des Rivieres, Daniel G. Bobrow, 1991-07-30 The authors introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS The CLOS metaobject protocol is an elegant high performance extension to the CommonLisp Object System The authors who developed the metaobject protocol and who were among the group that developed CLOS introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS Kiczales des Rivi res and Bobrow show that the art of metaobject protocol design lies in creating a synthetic combination of object oriented and reflective techniques that can be applied under existing software engineering considerations to yield a new approach to programming language design that meets a broad set of design criteria One of the major benefits of including the metaobject protocol in programming languages is that it allows users to adjust the language to better suit their needs Metaobject protocols also disprove the adage that adding more flexibility to a programming language reduces its performance In presenting the principles of metaobject protocols the authors work with actual code for a simplified implementation of CLOS and its metaobject protocol providing an opportunity for the reader to gain hands on experience with the design process They also include a number of exercises that address important concerns and open issues Gregor Kiczales and Jim des Rivi res are Members of the Research Staff and Daniel Bobrow is a Research Fellow in the System Sciences Laboratory at Xerox Palo Alto Research Center

Object-Oriented Construction Handbook Heinz Züllighoven, Robert F. Beeger, 2005 Object oriented programming OOP has been the leading paradigm for developing software applications for at least 20 years Many different methodologies approaches and techniques have been created for OOP such as UML Unified Process design patterns and eXtreme Programming Yet the actual process of building good software particularly large interactive and long lived software is still emerging Software engineers familiar with the current crop of methodologies are left wondering how does all of this fit together for designing and building software in real projects This handbook from one of the world s leading software architects and his team of software engineers presents guidelines on how to develop high quality software in an application oriented way It answers questions such as How do we analyze an application domain utilizing the knowledge and experience of the users What is the proper software architecture for large distributed interactive systems that can utilize UML and design patterns Where and how should we utilize the techniques and methods of the Unified Process and eXtreme Programming This book brings together the best of research development and day to day project work The strength of the book is that it focuses on the transition from design to implementation in addition to its overall vision about software development Bent Bruun Kristensen University of Southern Denmark Odense *Fluent Python* Luciano Ramalho, 2015-07-30 Python s simplicity lets you become productive quickly but this often means you aren t using everything it has to offer With

this hands on guide you ll learn how to write effective idiomatic Python code by leveraging its best and possibly most neglected features Author Luciano Ramalho takes you through Python s core language features and libraries and shows you how to make your code shorter faster and more readable at the same time Many experienced programmers try to bend Python to fit patterns they learned from other languages and never discover Python features outside of their experience With this book those Python programmers will thoroughly learn how to become proficient in Python 3 This book covers Python data model understand how special methods are the key to the consistent behavior of objects Data structures take full advantage of built in types and understand the text vs bytes duality in the Unicode age Functions as objects view Python functions as first class objects and understand how this affects popular design patterns Object oriented idioms build classes by learning about references mutability interfaces operator overloading and multiple inheritance Control flow leverage context managers generators coroutines and concurrency with the concurrent futures and asyncio packages Metaprogramming understand how properties attribute descriptors class decorators and metaclasses work

Middleware'98 Nigel Davies,Kerry Raymond,Jochen Seitz,2012-12-06 Welcome to Middleware 98 and to one of England s most beautiful regions In recent years the distributed systems community has witnessed a growth in the number of conferences leading to difficulties in tracking the literature and a consequent loss of awareness of work done by others in this important field The aim of Middleware 98 is to synthesise many of the smaller workshops and conferences in this area bringing together research communities which were becoming fragmented The conference has been designed to maximise the experience for attendees This is reflected in the choice of a resort venue rather than a big city to ensure a strong focus on interaction with other distributed systems researchers The programme format incorporates a question and answer panel in each session enabling significant issues to be discussed in the context of related papers and presentations The invited speakers and tutorials are intended to not only inform the attendees but also to stimulate discussion and debate *ECOOP*

Collaboration between Human and Artificial Societies Julian A. Padget, 2006-12-31 The full title of the HCM network project behind this volume is VIM A virtual multicomputer for symbolic applications The three strands which bound the network together were parallel systems advanced compilation techniques and artificial intelligence with a common substrate in the programming language Lisp The initial aim of the project was to demonstrate how the combination of these three technologies could be used to build a virtual multicomputer an ephemeral persistent machine of available heterogeneous computing resources for large scale symbolic applications The system would support a virtual processor abstraction to distribute data and tasks across the multicomputer the actual physical composition of which may change dynamically Our practical objective was to assist in the prototyping of dynamic distributed symbolic applications in artificial intelligence using whatever resources are available probably networked workstations so that the developed program could also be run on more exotic hardware without reprogramming What we had not foreseen at the outset of the project was how agents would unify the strands at the application level as distinct from the system level outlined above It was as a result of the agent in uence that we held two workshops in May and December 1997 with the title Collaboration between human and artificial societies The papers collected in this volume are a selection from presentations made at those two workshops In each case the format consisted of a number of invited speakers plus presentations from the network partners
