Autonomic Nervous System Ruud M. Buijs, 2013-11-11
The overarching theme of the present chapter is the importance of the interaction between brain and body in order to maintain homeostasis, an interaction rather than a mere top down or reflex regulation, as signals from the organs may influence the functioning of the brain. For example, the reflex regulation of blood pressure and heart rate is not only subject to modulation by ascending information from the body but also by descending information from several areas in the hypothalamus and cortex. The central nervous system (CNS) has the capacity to control its output via the autonomic nervous system (ANS) using an amazing differentiation. For example, not only do the biological clock and prefrontal cortex contain neurons which influence the parasympathetic or sympathetic motor neurons, they also contain different neurons that project to diverse body compartments. In the end, this leads to integrated responses whereby visceral sensory information reaches higher centers in the CNS via vagal or spinal sensory pathways, causing a reaction which takes into account factors such as the time of day, the season, the reproductive status, mood. Based on all this information, the brain sets the balance of the different parts of the ANS, causing its output to change its emphasis according to the situation. A disturbed balance, either as a result of behavior or of disease of any of the organs, may lead to pathology affecting the functioning of the entire individual.

Autonomic Nervous System Ruud M. Buijs, Dick F. Swaab, 2013-11-11
Autonomic Nervous System provides an introduction to the latest science and detailed chapters on advances in the clinical diagnosis and treatment of autonomic system disorders. The autonomic nervous system controls all involuntary actions within the human nervous system. Core body functions regulated by the autonomic system include breathing, heartbeat, blood pressure, body temperature, perspiration, and bowel, bladder, and sexual function. Our understanding of the neurotransmitters associated with the autonomic nervous system has expanded over the past 15 years, associated with current research efforts, and are now impacting the diagnosis and treatment of autonomic nervous system disorders by clinical neurologists. This

volume is a valuable companion for neuroscience and clinical neurology researchers and practitioners A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances that have occurred in clinical neurology and the neurosciences and their impact on the understanding of neurological disorders and on patient care

Structure of the Autonomic Nervous System G. Gabella, 2012-12-06 A conspicuous portion of the peripheral nervous system is part of the vegetative nervous system it includes all the neurons which innervate the viscera salivary and lacrimal glands the heart and blood vessels all other smooth muscles of the body notably the intrinsic muscles of the eye and the muscles of the hair Only part of the system belongs to the peripheral nervous system it has also its own nuclei and pathways in the central nervous system The distinction between visceral and somatic functions is a very old one in our culture With the development of neurology the notion of a widespread nervous control of body functions emerged Winslow 1732 used the term *nervi sympathici majores* for

those nerves which he thought to carry about sympathies and then co ordinate various viscera s functions His was an anatomical break through which obscured Willis intercostal nerve and Vesalius cranial nerve The notion was developed among others by John stone 1764 who arrived with the aid of some very accurate anatomical observations at the problem of the nervous influence on motion and sensitivity of viscera By the end of the eighteenth century it was clear with Bichat 1800 that what he called sympa thetic nervous system and his pupil Reil a few years later vegeta tive nervous system controlled visceral functions fa vie organique whereas somatic functions fa vie anima fe were under direct control from the brain and spinal cord

Autonomic Nervous System Daniel Pedro Cardinali,2017-08-04 A traditional view of the Autonomic Nervous System ANS considers only its peripheral part the sympathetic and parasympathetic systems However this view misses to consider the most important ANS function the maintenance of homeostasis This term is used today to define not only the strategies that allow the body proper response to changes in the environment reactive homeostasis but also temporal mechanisms that allow the body to predict the most likely timing of environmental stimuli predictive homeostasis based on biological rhythms This book discusses the ANS from both an enlarged and a timed perspective First it presents how the organization of the ANS is hierarchical into different levels Following that the book discusses how the ANS changes functionally in the three body configurations wakefulness slow sleep rapid eye movement sleep found in a 24 hour cycle Finally the most important clinical implications of this enlarged and timed vision of ANS will be discussed
