Implementing IBM Storage Data Deduplication Solutions Alex Osuna, Eva Balogh, Alexandre Ramos Galante de Carvalho, Rucel F. Javier, Zohar Mann, IBM Redbooks, 2011-03-24 Until now the only way to capture store and effectively retain constantly growing amounts of enterprise data was to add more disk space to the storage infrastructure an approach that can quickly become cost prohibitive as information volumes continue to grow and capital budgets for infrastructure do not. In this IBM Redbooks publication we introduce data deduplication which has emerged as a key technology in dramatically reducing the amount of and therefore the cost associated with storing large amounts of data. Deduplication is the art of intelligently reducing storage needs through the elimination of redundant data so that only one instance of a data set is actually stored. Deduplication reduces data an order of magnitude better than common data compression techniques. IBM has the broadest portfolio of deduplication solutions in the industry giving us the freedom to solve customer issues with the most effective technology. Whether it is source or target inline or post hardware or software disk or tape IBM has a solution with the technology that best solves the problem. This IBM Redbooks publication covers the current deduplication solutions that IBM has to offer IBM ProtecTIER Gateway and Appliance IBM Tivoli Storage Manager IBM System Storage N series Deduplication. **IBM System Storage N series with VMware vSphere 4.1** Roland Tretau, Christian Prediger Appel, IBM Redbooks, 2012-04-09 This IBM Redbooks publication provides a basic introduction to the IBM System Storage N series virtualization and VMware. It explains how to use the N series with VMware vSphere 4 environments and the benefits of doing so. Examples are given on how to install and set up VMware ESXi server with the N series. This edition includes information about the Virtual Storage Console VSC which is another N series software product that works with VMware. VSC provides local backup and recovery capability. You have the option to replicate backups to a remote storage system by using SnapMirror relationships. Backups can be performed on individual virtual machines or on datastores with the option of updating the SnapMirror relationship as part of the backup on a per job basis. Similarly restores can be performed at a data store level or individual virtual machine level. IBM System Storage N series in conjunction with VMware vSphere 4 helps complete the virtualization hierarchy by providing both a server and storage virtualization solution. Although this configuration can further assist with other areas of virtualization networks and applications these areas of virtualization are not covered in detail in this book.
