Bridge to Abstract Mathematics Ralph W. Oberste-Vorth, Aristides Mouzakis, Bonita A. Lawrence, 2012-12-31 A Bridge to Abstract Mathematics will prepare the mathematical novice to explore the universe of abstract mathematics Mathematics is a science that concerns theorems that must be proved within the constraints of a logical system of axioms and definitions rather than

theories that must be tested revised and retested Readers will learn how to read mathematics beyond popular computational calculus courses Moreover readers will learn how to construct their own proofs The book is intended as the primary text for an introductory course in proving theorems as well as for self study or as a reference Throughout the text some pieces usually proofs are left as exercises Part V gives hints to help students find good approaches to the exercises Part I introduces the language of mathematics and the methods of proof The mathematical content of Parts II through IV were chosen so as not to seriously overlap the standard mathematics major In Part II students study sets functions equivalence and order relations and cardinality Part III concerns algebra The goal is to prove that the real numbers form the unique up to isomorphism ordered field with the least upper bound In the process we construct the real numbers starting with the natural numbers Students will be prepared for an abstract linear algebra or modern algebra course Part IV studies analysis Continuity and differentiation are considered in the context of time scales nonempty closed subsets of the real numbers Students will be prepared for advanced calculus and general topology courses There is a lot of room for instructors to skip and choose topics from among those that are presented

Unequal Eugenia Cheng, 2025-09-02 Why the familiar equal sign isn't just a marker of sameness but a gateway into math's and humanity's most profound questions Math is famous for its equations $1 + 1 = 2$ $a^2 + b^2 = c^2$ or $y = mx + b$ Much of the time it can seem like that's all mathematics is following steps to show that what's on one side of an equation is the same as what's on the other In *Unequal* Eugenia Cheng shows that's just part of the story and the boring part to boot Mathematics isn't only about showing how numbers and symbols are the same It isn't even just about numbers and symbols at all but a world of shapes symmetries logical ideas and more And in that world the boundary between things being equal and unequal is a gray area or perhaps a rainbow of beautiful vibrant subtly nuanced color As *Unequal* shows once you go over that rainbow almost everything can be considered equal and unequal at the same time whether it's shapes seen from the right perspective a circle is the same as an ellipse words synonyms or people even numbers It all depends on what features we care about And it's up to us what we do about it That's because mathematics isn't a series of rules facts or answers It's an invitation to a more powerful way of thinking
