

Extended-Reach Drilling: Breaking the 10-km Barrier

- Geosteering, torque reduction and casing flotation have all contributed to record-breaking extended-reach drilling achievements.
- The limits of directional drilling continue to be pushed back as horizontal reservoir sections greater than 2500 m are being drilled, cased, cemented and completed to tap reserves at extreme distances from surface wellsites.

Oilfield Review Winter 1997

2

- **Extended-reach drilling technology** recently achieved a new milestone with the drilling and completion of a 10-km [33,000-ft] stepout well, some 2 km [6600 ft] longer than the previous world record.
- The main technical **hurdles** to the success of this well were reducing torque and drag, controlling fluid circulation and maintaining directional control.
- Solutions were not simple because methods to mitigate technical challenges in one area often had adverse consequences in others.
- One factor, **drillstring rotation**, repeatedly surfaced as part of the solution to all the major problems in this extended-reach well.

Although the oil and gas leaseholders themselves are primarily responsible for the soundness of their operations, the Minerals Management Service (MMS) of the Department of the Interior is charged with prescribing safe practices and inspecting platforms. In response to an MMS request, this book examines possible revisions of MMS's inspection system, appraises inspection practices elsewhere both in government and industry, assesses the advantages and disadvantages of alternative procedures, and recommends potentially more efficient practices aimed at increasing industry's awareness of its accountability for safety. **Federal Energy Guidelines** United States.
