The book depicts all types of graphs, diagrams, and maps explained in detail with numerous examples. The emphasis is on their appropriate data structure, the relevance of selecting the correct technique, methods of their construction, advantages and disadvantages of their use, and applications of these techniques in analyzing and realizing the spatial pattern of various geographical features and phenomena. Creating a Common Polity

Emily Mackil, 2016-04-05. In the ancient Greece of Pericles and Plato, the polis or city state reigned supreme, but by the time of Alexander, nearly half of the mainland Greek city states had surrendered part of their autonomy to join the larger political entities called koina. In the first book in fifty years to tackle the rise of these so-called Greek federal states, Emily Mackil charts a complex, fascinating map of how shared religious practices and long-standing economic interactions facilitated political cooperation and the emergence of a new kind of state. Mackil provides a detailed historical narrative spanning five centuries to contextualize her analyses, which focus on the three best-attested areas of mainland Greece: Boiotia, Achaia, and Aitolia. The analysis is supported by a dossier of Greek inscriptions, each text accompanied by an English translation and commentary.

Encyclopedia of Geographic Information Science

Karen Kemp, 2008. Geographic information science (GIScience) is an emerging field that combines aspects of many different disciplines. Spatial literacy is rapidly becoming recognized as a new essential pillar of basic education alongside grammatical, logical, and mathematical literacy. By incorporating location as an essential but often overlooked characteristic of what we seek to understand in the natural and built environment, geographic information science (GIScience) and systems (GISystems) provide the conceptual foundation and tools to explore this new frontier. The Encyclopedia of Geographic Information Science covers the essence of this exciting new and expanding field in an easily understood but richly detailed style. In addition to contributions from some of the best-recognized scholars in GIScience, this volume contains contributions from experts in GIS supporting disciplines who explore how their disciplinary perspectives are expanded within the context of GIScience: what changes when consideration of location is added, what complexities in analytical procedures are added when we consider objects in 2, 3, or even 4 dimensions, what can we gain by visualizing our analytical results on a map or 3D display. Key Features: Brings together GIScience literature that is spread widely across the academic spectrum. Offers details about the key foundations of GIScience, no matter what their disciplinary origins. Elucidates vocabulary that is an amalgam of all of these fields. Key Themes: Conceptual Foundations, Cartography and Visualization, Design Aspects, Data Manipulation, Data Modeling, Geocomputation, Geospatial Data, Societal Issues, Spatial Analysis, Organizational and Institutional Aspects. The

Digital Methods and Remote Sensing in Archaeology Maurizio Forte, Stefano Campana, 2017-02-10 This volume debuts the new scope of Remote Sensing which was first defined as the analysis of data collected by sensors that were not in physical contact with the objects under investigation using cameras scanners and radar systems operating from spaceborne or airborne platforms A wider characterization is now possible Remote Sensing can be any non destructive approach to viewing the buried and nominally invisible evidence of past activity Spaceborne and airborne sensors now supplemented by laser scanning are united using ground based geophysical instruments and undersea remote sensing as well as other non invasive techniques such as surface collection or field walking survey Now any method that enables observation of evidence on or beneath the surface of the earth without impact on the surviving stratigraphy is legitimately within the realm of Remote Sensing The new interfaces and senses engaged in Remote Sensing appear throughout the book On a philosophical level this is about the landscapes and built environments that reveal history through place and time It is about new perspectives the views of history possible with Remote Sensing and fostered in part by immersive interactive 3D and 4D environments discussed in this volume These perspectives are both the result and the implementation of technological cultural and epistemological advances in record keeping interpretation and conceptualization Methodology presented here builds on the current ease and speed in collecting data sets on the scale of the object site locality and landscape As this volume shows many disciplines surrounding archaeology and related cultural studies are currently involved in Remote Sensing and its relevance will only increase as the methodology expands
