Ocean Carbon Cycle and Climate Mick Follows,Temel Oguz,2004-08-03 Our desire to understand the global carbon cycle and its link to the climate system represents a huge challenge These overarching questions have driven a great deal of scientific endeavour in recent years What are the basic oceanic mechanisms which control the oceanic carbon reservoirs and the partitioning of carbon between ocean and atmosphere How do these mechanisms depend on the state of the climate system and how does the carbon cycle feed back on climate What is the current rate at which fossil fuel carbon dioxide is absorbed by the oceans and how might this change in the future To begin to answer these questions we must first understand the distribution of carbon in the ocean its partitioning between different ocean reservoirs the solubility and biological pumps of carbon the mechanisms controlling these reservoirs and the relationship of the significant physical and biological processes to the physical environment The recent surveys from the JGOFS and WOCE Joint Global Ocean Flux Study and World Ocean Circulation Experiment programs have given us a first truly global survey of the physical and biogeochemical properties of the ocean These new high quality data provide the opportunity to better quantify the present oceans reservoirs of carbon and the changes due to fossil fuel burning In addition diverse process studies and time series observations have clearly revealed the complexity of interactions between nutrient cycles ecosystems the carbon cycle and the physical environment Exploring Ecology Patricia Warren,Janet Galle,2005 Designed specifically for easy use
