

Activity A:
Mountain streams

Get the Gizmo ready:

- Check that **Mountain stream** and **Short-term erosion** are selected.
- If necessary, click outside the circle to close the zoomed-in view.

Introduction: **Erosion** occurs when sediments and other materials are moved from one place to another. Along with **weathering**, which is the breakdown of large rocks into smaller sediments, erosion can have a profound impact on the landscape.

Question: How does river erosion affect landscapes in the mountains?

1. **Label:** First, get to know some of the different parts of a mountain stream. Turn on **Show labels**. Label the image to the right, then fill in the word that goes with each description.

A small stream that flows into a larger stream:

tributary

A place along a stream where water drops straight down:

waterfall

A letter that describes the shape of a typical mountain valley:

V-shaped valley

The side of a stream:

streambed

The bottom of a stream:

streambank

2. **Observe:** Turn off **Show labels**. Next to "Release barrel," click **Play** (). Observe how fast the barrel moves as it floats down the stream.

What happens when the barrel goes over the **waterfall**?

It continues to be on the side that it was before it plunged from the waterfall.

3. **Calculate:** The two red flags are 100 meters apart. The time at which the barrel passes the flag is shown. Remember, there are 60 seconds in a minute.

A. How many seconds did it take for the barrel to go 100 meters?

1 min 30 sec

B. To find the barrel's speed, use a calculator to divide the distance traveled (100 m) by the time it took the barrel to float 100 m. The units are meters per second (m/s).

What is the speed of the barrel?

$100\text{m}/90\text{sec}$
 $=1.1$

A technical guide to agricultural practices in Zambia Food and Agriculture Organization of the United Nations,2021-10-14 This guide has been developed for extension officers in both the public and the private including those interested in agricultural development in Zambia The goal of this manual is to serve as a tool that allows readers to access up to date information about various agricultural practices and their advantages and disadvantages There are many organisations in Zambia that have programs that aim towards sustainable development in the agricultural sector Amongst these programs there are many different approaches to the goal of improving livelihoods Although these various programs have good reasons for promoting their specific methods this manual aims to take an independent stance to portray what all of them offer and why This manual also includes significant information about new approaches and traditional farmer practices or conventional farming methods The central theme in this manual is that there can never be only one way to achieve a goal under such diverse conditions as are found in agriculture Although a certain amount of benefit can be gained by rigid guidelines to agricultural practice for example a specific crop spacing tillage method or fertilizer recommendation the diverse factors that affect peoples decisions relate to economic social and environmental conditions make such guidelines impractical in many cases **Dear GLOBE Teachers: Globe Program, Teacher's Guide, Globe, 1997 Supplement**

,1997 **Federal Register** ,1992 *Advancing the forest and water nexus* Food and Agriculture Organization of the United Nations,2019-10-18 Forests are intrinsically linked to water forested watersheds provide 75 percent of our accessible freshwater resources Millennium Ecosystem Assessment 2005 and both forest and water resources are relevant to the achievement of all 17 Sustainable Development Goals Despite the important interlinkages the forest water nexus is often unaccounted for in policy and planning For example three quarters of forests are not managed for soil and water conservation which poses a fundamental challenge to achieving sustainable and resilient communities and ecosystems It is paramount to employ an integrated approach to forest and water resources in management and policy that takes into account the complexity and contextual nature of forest water relationships To achieve this we must improve our understanding of forest water relationships within local contexts and at different scales as well as our ability to design implement and learn from landscape approaches that both rely on these forest water relationships and impact them In this context FAO s Forest and Water Programme has developed a module based capacity development facilitation guide for project and community
