

Attach the loose disconnect cable, from the hardware bag, to the opener with "S" hook. Close both ends of "S" hook to lock assembly together. Thread the disconnect cable through hole in right hand end bracket. Remove cable slack between the opener and right hand end bracket by pulling on the end of the cable.

Mark location on right door jamb, six feet above the ground to mount disconnect handle. Thread disconnect cable through handle bracket and handle. Align top of handle bracket with mark on wall. Remove all cable slack between the opener and top of handle bracket.

Insert and tighten #8-20 x 1/2" screw until snug, and then tighten screw 1 to 1-1/2 additional turns to secure cable in handle. Trim off excess cable from bottom of handle. Holding handle bracket, remove all remaining slack between the opener. With slack removed, secure bottom of handle bracket with (1) 1/4 x 1-1/2" lag screw.

Move disconnect handle to side exposing upper mounting hole in handle bracket. Secure handle bracket with a second 1/4 x 1-1/2" lag screw. Place emergency disconnect label next to mounted bracket. Use mechanical fasteners if adhesive will not adhere.

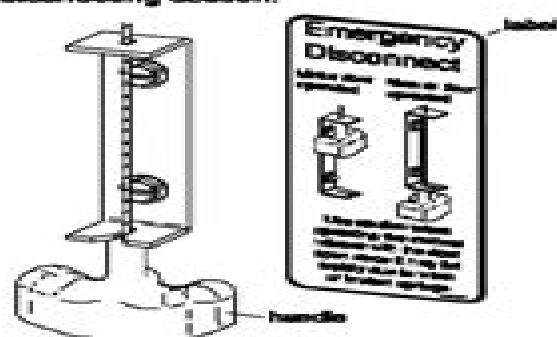

CAUTION: Pull handle just enough to remove the cable slack. Pulling the cable more could cause the opener to disconnect from the torque tube.

Clamp locking pliers onto both vertical tracks above third roller. This is to prevent garage door from rising while winding springs. **WARNING!** Failure to clamp track can allow door to raise and cause severe injury or death.

Using the emergency disconnect, pull disconnect handle downwards and place it in the manual door operated position. Use disconnect label for reference. Motor will be rotated 90° from its packaged position.

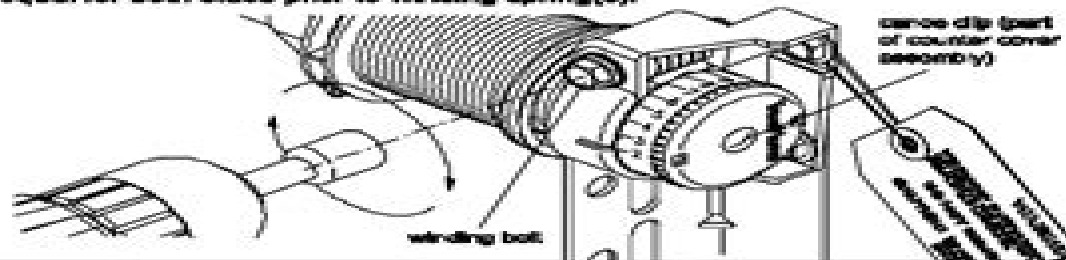

NOTE: If motor does not pivot 90°, see troubleshooting section.

DO NOT USE IMPACT GUN TO WIND SPRING(S)!

Press and hold in on the cance clip. Ensure the cable is in the first groove of the drum. Using an electric drill (high torque gear reduced to 1300 RPM preferred) with a 7/16" socket, carefully rotate right hand winding bolt clockwise, until counter shows 2-3 turns. This will keep the counterbalance cable taut while adjusting the left hand side counterbalance cable.

Repeat for the left side counterbalance cable. Single spring applications will require no spring prewinding. Ensure counterbalance cable tension is equal for both sides prior to winding spring(s).
