MACHINE LEARNING EXPLAINED: A PRACTICAL GUIDE TO DATA-DRIVEN DECISION MAKING Abdelhamid ZAIDI,Renato

Racelis Maaliw III,Mrs. K. P. Maheswari,Dr. Haewon Byeon,2023-10-30 During the course of the process of making a choice we rely on a variety of presumptions premises and the circumstances all of this is directed by the goal that is related with the decision itself However the premises and the knowledge of the corporation are dependent on our data since they are an essential component of our organization as a system The context and the assumptions are both external factors that are

beyond the control of any decision maker Both the background and the assumptions represent outside forces that are not within the control of any decision maker A prominent example of a conceptual error is the misunderstanding that exists between data and information which in reality correspond to entirely distinct ideas This misunderstanding is a common occurrence In point of fact information and data cannot in any way be substituted for one another in any context To put this another way there is no guarantee that the data will be consistent comparable or traceable despite the fact that we are able to collect data from a broad variety of distinct data sources This is because there are so many diverse data sources Because of this in order for us to make a decision we need to have a good comprehension of both the component that is presently being examined and the data that is linked with it at the present time Only then will we be able to make an informed choice The identification of the system itself is the first step that must be taken before any other aspects of the system such as its boundaries context subsystems feedback inputs and outputs can be determined Because of this it is significant because according to the point of view connected with general system theory it is necessary to identify the system that is being discussed In order to get a more in depth understanding of the system we must first begin by defining it After that we may proceed to quantifying each associated quality in order to achieve this goal This would make it possible for us to have a better understanding of the system Because of this in order for us to collect information on the topic of the research we will initially need to measure it in order to quantify the characteristics that are associated with it For this we will need to perform certain measurements on the subject After that we will establish the indicators that will be applied for the purpose of determining the value of each measure and we will do so by utilizing the results of the stage that came before it Within the context of this method the Measurement and Evaluation M E process can gain an advantage from making use of a conceptual framework that is built on top of an underlying ontology The M E framework makes it possible to describe the basic ideas which prepares the way for a measurement process to be carried out in a manner that is consistent and repeatable This is made possible by the fact that the framework makes it possible to specify the essential concepts The ability of a measuring process to be automated is of the utmost significance even if it is required for a measuring process to give findings that are consistent comparable and traceable The ability of a measuring process to be automated is of the utmost relevance Because the activities that take place in today s economy take place in real time we need to pay considerable attention to the use of online monitoring in order to notice and avoid a variety of different scenarios while they are happening Because of this we will be able to reduce risk while maximizing our efficiency In this regard the functionality of the measurement and evaluation frameworks is an extremely valuable asset as they make it possible to organize and automate the process of measuring in a manner that is consistent This makes the frameworks an exceptionally helpful asset As a result of this the frameworks are a very useful asset As soon as it is feasible to guarantee that the measurements are comparable consistent and traceable the method of decision making will naturally be based on their history which will consist of the measurements collected

throughout the years This will be the case as soon as it is possible to guarantee that the measurements are comparable consistent and traceable This will take place as soon as it is practical to assure that the measurements are comparable consistent and traceable In this regard the organizational memory is of special importance due to the fact that it makes it possible to store prior organizational experience and knowledge in order to get ready for future proposals that is as the foundation for a range of different assumptions and premises among other things In this regard the organizational memory is of particular use Because of this the organizational memory is a component that is of very high importance Measurements and the experiences that are associated with them provide continuous nourishment for the organizational memory and the organizational memory provides the foundation for the feedback that is utilized in the process of decision making
