

3. Group Three - External Connections

Each element of group three will now be described.

3.1 Park/Neutral Switch

The selector cam activates the park/neutral switch, which prevents the car from starting in reverse, drive or sport, and switches on the reverse lights when in reverse. The switch also sends its position to the CVT Software in the ECU that uses this switch in conjunction with the gear selector switch to establish the correct driving mode.

Fig. 32: Switch & selector mechanism

2. Selector cam

When the selector lever is in the park or neutral position and the ignition is switched on, the CVT software in the ECU will energise a shift lock solenoid on the selector lever in the car. This locks the lever in the park or neutral position. The selector lever cannot be moved from the park or neutral position until the footbrake is applied.
