Visible Learning for Science, Grades K-12 John Almarode, Douglas

Fisher, Nancy Frey, John Hattie, 2018-02-15 In the best science classrooms teachers see learning through the eyes of their

students and students view themselves as explorers. But with so many instructional approaches to choose from inquiry

laboratory project based learning discovery learning which is most effective for student success. In Visible Learning for

Science the authors reveal that it is not which strategy but when and plot a vital K-12 framework for choosing the right

approach at the right time depending on where students are within the three phases of learning: surface, deep and transfer.

Synthesizing state of the art science instruction and assessment with over fifteen years of John Hattie's cornerstone

educational research, this framework for maximum learning spans the range of topics in the life and physical sciences.

Employing classroom examples from all grade levels, the authors empower teachers to plan, develop and implement high

impact instruction for each phase of the learning cycle. Surface learning when through precise approaches students explore

science concepts and skills that give way to a deeper exploration of scientific inquiry. Deep learning when students engage

with data and evidence to uncover relationships between concepts, students think metacognitively and use knowledge to plan

investigate and articulate generalizations about scientific connections. Transfer learning when students apply knowledge of

scientific principles, processes and relationships to novel contexts and are able to discern and innovate to solve complex

problems. Visible Learning for Science opens the door to maximum impact science teaching so that students demonstrate

more than a year's worth of learning for a year spent in school.
