

BRIEF HISTORY OF SURGICAL INSTRUMENTS

Surgical instruments go as far back as 10,000 BC. Archaeological discoveries have unveiled cutting tools like a sharp flint used to sharpen animal teeth, grasping tools to extract arrows, saws, forceps and other ancient surgical instruments. Rubble amidst the volcanic ashes of the old Roman city of Pompeii unveiled an entire well-preserved arsenal of surgical instruments. The find is known as the *House of the Surgeon*, because of the nature of the collection found in the home.

Claude Moore Health Sciences Library by the University of Virginia received a reproduction of the Pompeii instruments in 1947. This library is one of the best preserved collections of this nature. Few changes have been made to surgical instruments' design and functionality since Hippocrates (5th century BC), who is called the father of medicine, and Galen (2nd century). Here are a few examples along with short description of how the instruments were used. The descriptions of the usage were provided by the medical writers of antiquity.

Hooks (Greek name: agkistrion, Latin name: hamus, acutus) like the ones on the next page served the same purpose as today, to dissect blood vessels, manipulation or retracting. Both blunt and sharp were found.
