CE 7UG0
IEC 60947-5-1
IEC 60947-8 A

7UG0881-1BU20

Thermistor motor protection relay is used to monitor the winding temperature of motors / generators using PTC sensors and to protect them from abnormal overheating in accordance to the product standard IEC 60947-8, control units for built-in thermal protection (PTC) for rotating electrical machines.

PTC resistor sensors which are built-in into the motor windings, measures the motor heating. With increase of the temperature in the motor, the resistance of the PTC sensors will increase.

Operating modes :

1. **Sensor Short** : Sensor is short / damaged.
2. **Sensor Healthy** : The motor is running safely.
3. **Sensor Trip** : When the motor exceeds its temperature beyond its safety limit, it is in trip condition. It stays in trip condition until the motor cools down and reaches Cut-in.
4. **Sensor Open** : Sensor is open / break.
5. **Sensor Recovery / Cut-in / Reset** : After the motor cools down, it reaches Cut-in condition. The relay switches automatically, in Auto mode. Whereas in Manual mode, the user has to manually reset (PRG Key or Remote reset R1-S1) when in Cut-in condition.

Electrical Power System Protection C. Christopoulos, A. Wright, 1999-06-30 The death of Professor Arthur Wright in the summer of 1996 deprived me of a friend and a colleague whose judgement and experience shaped this book I pay tribute to his contributions to protection and electrical engineering education In the five years since the first edition appeared many developments have taken place and it is now necessary to update the book The use of digital communications and advanced signal processing techniques is now widespread and several fully numeric relays are available from manufacturers Two new Chapters 13 and 14 have been added to introduce readers to these concepts and associated techniques Artificial intelligence is making its impact in all engineering applications and power system protection is no exception Expert systems fuzzy logic artificial neural networks adaptive and integrated protection synchronized measurements using the global positioning system genetic algorithms flexible AC transmission systems are some of the techniques considered in connection with protection Although many of these techniques have not yet found major application in protection it is nevertheless essential for the educated protection engineer to have a basic understanding of the underlying principles and methodology so that he or she

can evaluate their suitability for new relaying problems and applications Chapter 15 was therefore added to guide readers through this developing area I have also added some new material in other chapters to reflect changes over the past years
