Kapilevich, Stuart W. Harmer, Nicholas J. Bowring, 2014-09-17 In response to the ever increasing global threat of terrorist attacks the personal screening industry has been growing at a rapid rate Many methods have been developed for detecting concealed weapons and explosives on the human body In this important new book the authors discuss their experiences over the last decade designing and testing microwave and millimetre wave detection and screening systems It includes examples of actual devices that they have built and tested along with test results that were obtained in realistic scenarios The book focuses on the development of non imaging detection systems which are similar to radar These systems do not form a conventional image of the scene and the person s being screened Instead the sensors detect and analyze the effect that the body and any concealed objects has on a transmitted waveform These systems allow remote detection of both metallic and dielectric devices concealed on the human body in both indoor and outdoor environments The book discusses a number of sensor types including active millimetre wave sensors using the direct detection and the heterodyne approach active microwave sensors for CNR based object detection passive millimetre wave sensors and the role of shielding effects in operating non imaging MM wave sensors The goal of this book is to systemize the test results obtained by the authors helping specialists to develop improved screening systems in the future Another goal is to show how the use of non imaging systems can reduce the cost of the screening process Guide to Simulation-Based Disciplines Saurabh Mittal, Umut

Richmond, Gözüm Visoka, 2021 Peacebuilding and statebuilding is one of the main approaches for preventing managing and mitigating global insecurities dealing with the humanitarian consequences of civil wars and expanding democracy and neoliberal economic regimes Peace formation is a relatively new concept addressing how local actors attempt to shape or work in parallel to international and national projects The Oxford Handbook of Peacebuilding Statebuilding and Peace Formation serves as an essential guide to this vast intellectual landscape It offers a systematic overview of conceptual foundations political implications and tensions at the global regional and local levels as well as key policies practices examples and discourses underlining all segments of peacebuilding and statebuilding **All Data Are Local** Yanni Alexander Loukissas, 2019-04-30 How to analyze data settings rather than data sets acknowledging the meaning making power of the local In our data driven society it is too easy to assume the transparency of data Instead Yanni Loukissas argues in All Data Are Local we should approach data sets with an awareness that data are created by humans and their dutiful machines at a time in a place with the instruments at hand for audiences that are conditioned to receive them The term data set implies something discrete complete and portable but it is none of those things Examining a series of data sources important for understanding the state of public life in the United States Harvard's Arnold Arboretum the Digital Public Library of America UCLA's Television News Archive and the real estate marketplace Zillow Loukissas shows us how to analyze data settings rather than data sets Loukissas sets out six principles all data are local data have complex attachments to place data are collected from heterogeneous sources data and algorithms are inextricably entangled interfaces recontextualize data and data are indexes to local knowledge He then provides a set of practical guidelines to follow To make his argument Loukissas employs a combination of qualitative research on data cultures and exploratory data visualizations Rebutting the myth of digital universalism Loukissas reminds us of the meaning making power of the local **Science as It Could Have Been** Lena Soler, Emiliano Trizio, Andrew Pickering, 2016-02-19 Could all or part of our taken as established scientific conclusions theories experimental data ontological commitments and so forth have been significantly different Science as It Could Have Been focuses on a crucial issue that contemporary science studies have often neglected the issue of contingency within science It considers a number of case studies past and present from a wide range of scientific disciplines physics biology geology mathematics and psychology to explore whether components of human science are inevitable or if we could have
