Developing and Validating an Analytic Rating Scale for Large-Scale EFL Writing Assessment Shaoyan Zou, 2025-10-21

The debate between holistic and analytical scoring methods in second language assessment has long persisted. This book addresses the effectiveness and validity of the holistic rating scale used in China's high stakes CET 4 College English Test Band 4 writing tests via systematic case study analysis. Using a multi-phase mixed methods research methodology, the author creates and validates a new analytical rating scale that redefines and operationalizes critical aspects of writing assessment. Through extensive empirical evidence including rater cognition studies, expert reviews, and Rasch-based descriptor calibration, the author reveals the limitations of holistic scoring systems and demonstrates the necessity and validity of analytical methods. The author convincingly argues that this new scoring method translates to a more transparent, fair, and diagnostic model for large-scale EFL writing assessment. This book is an essential reference for researchers in applied linguistics, language assessment, and English language education. It also offers valuable insights for assessment specialists, test developers, and language policymakers seeking more effective evaluation frameworks. [Automated Essay Scoring](#)

Beata Beigman Klebanov, Nitin Madnani, 2022-05-31. This book discusses the state of the art of automated essay scoring, its challenges, and its potential. One of the earliest applications of artificial intelligence to language data, along with machine translation and speech recognition, automated essay scoring has evolved to become both a revenue-generating industry and a vast field of research with many subfields and connections to other NLP tasks. In this book, we review the developments in this field against the backdrop of Elias Page's seminal 1966 paper titled "The Imminence of Grading Essays by Computer." Part 1 establishes what automated essay scoring is about, why it exists, where the technology stands, and what are some of the main issues. In Part 2, the book presents guided exercises to illustrate how one would go about building and evaluating a simple automated scoring system, while Part 3 offers readers a survey of the literature on different types of scoring models, the aspects of essay quality studied in prior research, and the implementation and evaluation of a scoring engine. Part 4 offers a broader view of the field, inclusive of some neighboring areas, and Part 5 closes with summary and discussion. This book grew out of a week-long course on automated evaluation of language production at the North American Summer School for Logic, Language, and Information (NASSLLI), attended by advanced undergraduates and early-stage graduate students from a variety of disciplines. Teachers of natural language processing, in particular, will find that the book offers a useful foundation for a supplemental module on automated scoring. Professionals and students in linguistics, applied linguistics, educational technology, and other related disciplines will also find the material here useful. **Handbook of Automated Essay**
