Unit 3 – Making a Living

- 1 a) A. cleaner E teacher
B. florist F barber
C. cameraman G vet
D. decorator

b) (Suggested Answer Key)

- The cameraman would probably be paid well if the film he was working on was predicted to be a box office success.
- I would find the teacher's job more challenging than the others because you need a lot of patience to teach. I can also imagine the satisfaction you might get when you realise that your pupils finally understand the difficult aspects of the lesson.
- The vet's job would be extremely interesting for me as I've always loved animals and am especially interested in all aspects of wildlife.
- The decorator's job would be too repetitive for me. Imagine doing the same thing day in, day out! It must be very tiring too, looking up and down at ceilings and walls for hours on end!
- The most boring job would probably be the barber's job. The only thing that might reduce the boredom would be chatting with customers.

- c) A: I would certainly consider being a florist, as I love the idea of working with beautiful colours and shapes to create unusual designs.
B: I'm not so sure. I'm not really an arty sort of person, you see.

A: I would certainly not consider being a cleaner, simply because I have enough to do cleaning my own house never mind cleaning other houses!

B: I agree. It's very hard work.

Plants and Organelles Edwin J. Atencio, Howard S. Bilofsky, June Bossinger, 2014-05-10 Nucleotide Sequences 1986 1987 Volume IV *Plants and Organelles* presents data that reflect the information found in GenBank Release 44.0 of August 1986. This book provides information pertinent to the unique international collaboration between two leading nucleotide sequence data libraries: one based in Europe and one in the United States. Organized into two sections, this volume begins with an overview of the sequences, some basic identifying information, and some of the biological annotations. This text then discusses the EMBL Nucleotide Sequence Data Library, an international center of fundamental research with its main focus in the fields of cell biology, molecular structures, instrumentation, and differentiation. This book discusses as well the GenBank database established in 1982 by the National Institute of General Medical Sciences of the U.S. National Institutes of Health. This book is a valuable resource for molecular biologists and other investigators collecting the large number of reported DNA and RNA sequences and making them available in computer-readable form.
