Urban Systems (Routledge Revivals) C S Bertuglia, G. Leonardi, S. Occelli, G. A. Rabino, R. Tadei, Alan Wilson, 2013-10-18

This edited collection first published in 1987 provides a comparative analysis of different approaches to urban modelling and lays the foundations for the possibility of integration and a more unified field. The first part contextualises the development of the field of urban systems modelling focusing on the variety of approaches and possible implications of this on the future of research and methodology. Next the editors consider economic and non economic approaches followed by an analysis of spatial interaction based approaches. Providing an overview to the field and research literature the overarching argument is that there should be an integrated methodological approach to urban system modelling.

Urban Dynamics (Routledge Revivals) C.S. Bertuglia, 2013-12-19 Originally published in 1990 this work analyses the use of contemporary computer models to simulate urban systems. The work deals with the two significant traditions of model building firstly the building of integrated models following the seminal research of Lowry first published in 1964 but with relatively simple submodels and secondly intensive research on particular submodels with a variety of techniques. This volume constructs a model building exercise which integrates the two traditions an integrated model in a modular form with alternative components using the most advanced submodels. The book concludes with a presentation of an example of an operational model of this type.
