Thickening and Gelling Agents for Food Alan P.

Imeson,2012-12-06 The success of the first edition of *Thickening and Gelling Agents for Food* underlined the keen interest in functional food ingredients. In this second edition the text has been completely revised and updated to reflect the current market trends. New chapters have been included to broaden the scope of materials used by the food technologist. Agar and konjac gum flour probably the most traditional gelling and thickening agents but most widely utilised in the Far East have been given greater prominence. Microcrystalline cellulose a relatively new food stabiliser used widely in the USA has been included. The preparation of traditional products using formulations suited to bulk food processing is described while new areas focus on low fat and low calorie foods where there is an even greater demand for controlling the stability viscosity gelation and mouthfeel using a broad range of thickening and gelling agents. Recent legislative changes in the USA and EC impact the use of additives including gellan gum konjac flour carrageenan tara gum and microcrystalline cellulose some changes have increased the number of additives approved for foods while others allow a broader range of materials to be used in foods. The detailed information on products properties and applications given in this second edition will enable these highly functional thickening and gelling agents to be used to full advantage. *Extended Stability for Parenteral Drugs*

Thickening and Gelling Agents for Food A. Imeson, 2012-12-06 Thickening and gelling agents are invaluable for providing high quality foods with consistent properties shelf stability and good consumer appeal and acceptance. Modern lifestyles and consumer demands are expected to increase the requirements for these products. Traditionally starch and gelatin have been used to provide the desired textural properties in foods. Large scale processing technology places greater demands on the thickeners and gelling agents employed. Modified starches and specific qualities of gelatin are required together with exudate and seed gums seaweed extracts and most recently microbial polysaccharides to improve product mouthfeel properties.
