Edmonston,2012-05-19 A guide to buying a used car or minivan features information on the strengths and weaknesses of
each model a safety summary recalls warranties and service tips **Vehicle Feedback and Driver Situation Awareness**
Guy H. Walker,Neville A. Stanton,Paul M. Salmon,2018-04-17 A potentially troubling aspect of modern vehicle design some
would argue is a trend for isolating the driver and reducing vehicle feedback usually in the name of comfort and refinement
but increasingly because of automation There is little doubt cars have become more civilised over the years yet despite this
the consequences of driver behaviour remain to a large extent anecdotal Readers will have heard such anecdotes for
themselves They usually take the form of drivers of a certain age recalling their first cars from the 1970s or 80s in which
doing 70 mph really felt like it The question is whether such anecdotes actually reflect a bigger more significant issue that
could be better understood Related questions have been explored in other domains such as aviation where the change to fly
by wire did indeed bring about some occasionally serious performance issues that were not anticipated Despite some clear
parallels automotive systems have been left relatively unstudied The research described in this book aims to explore
precisely these issues from a Human Factors perspective This means connecting the topics of vehicle feel vehicle dynamics

and automotive engineering with the latest research on driver situation awareness The problem is explored experimentally from a variety of theoretical viewpoints but the outcomes are consistently practical Here we have a promising new avenue along which the driver experience can be enhanced in novel and insightful ways Tools and templates are provided so that engineers and designers can try different ways to boost vehicle safety efficiency and enjoyment from a human centered perspective Association of American Publishers AAP Finalist for the 2019 PROSE Award Features Diagnosis of how vehicle feel impacts driver situation awareness and how this could aid future vehicle designs Multi theory approach to driver situation awareness and how different views of this important concept give rise to different insights Comprehensive analysis of situation awareness in driving the information requirements of drivers and how these needs can be supported Practical descriptions of how state of science Human Factors methods have been applied in practice
